VALLEY OF THE GIANTS

By DR. C. N. DOUGHERTY, D.C.

EIGHTH EDITION

THE TURNAGE-PATTON TRAIL:
Possibly one of the longest, single, continuous Dinosaur trackways found on the North American continent. This consists of 136 continuous left, right paces for a distance of 400 feet. There is a period of erosion, thereafter for 56 feet, then continues for an additional 21 tracks for a total of 157 tracks. This trail was rediscovered by Dr. Don Patton in September, 2000, on the Paluxy River in Glen Rose, Texas, during the Summer drought. The trail was originally discovered by Mr. Mike Turnage in the early 1970's.
This photo was taken in September, 2000, by AARON JUDKINS, Omniologist of Rainbow, Texas, and permission is granted to use for publication in this copy of "VALLEY OF THE GIANTS."

5th. Day Creation Week	Genesis 21; And GOD created great whales, and every living creature that moveth, which the waters brought forth abundantly, after their kind, and every winged fowl after his kind;
6th. Day Creation Week	Genesis 24; And GOD said, Let the earth bring forth the living creatures after his kind, cattle, and creeping thing, and beast of the earth after his kind;

G; 1:27, So God Created man in his own image, in the image of GOD created he him; male and female created he them.

I Samuel 17:4 And there went out a champion out of the camp of the Philistines named Goliath of Gath, whose height was six cubits and a span. (9 feet plus). If we are to believe God's word, and who would dare not, then we must accept Giant men and Dinosaurs as having lived in the same era on the newly created earth. This would leave no doubt that the tracks of both could appear on the same layer of rock in the same terrain. This further indicates that time tables of science must be revised.

The TIME is out of joint
Oh cursed spite
That ever I was born
to set it right.

Shakespeare

"Valley Of The Giants"
By: Cecil Dougherty, D.C.

What a special adventure you're about to take through this little book, Genesis 6:4 says "there were giants in those days" Sure enough, check out the footprints.

I've always had an attraction to gigantic things. The pyramids always fascinated me. Seeing the Pacific Ocean for the 1st time and visiting the Rocky Mountains west of Banff, Alberta as a child made me feel like a speck in comparison to Gods magnificent creation.

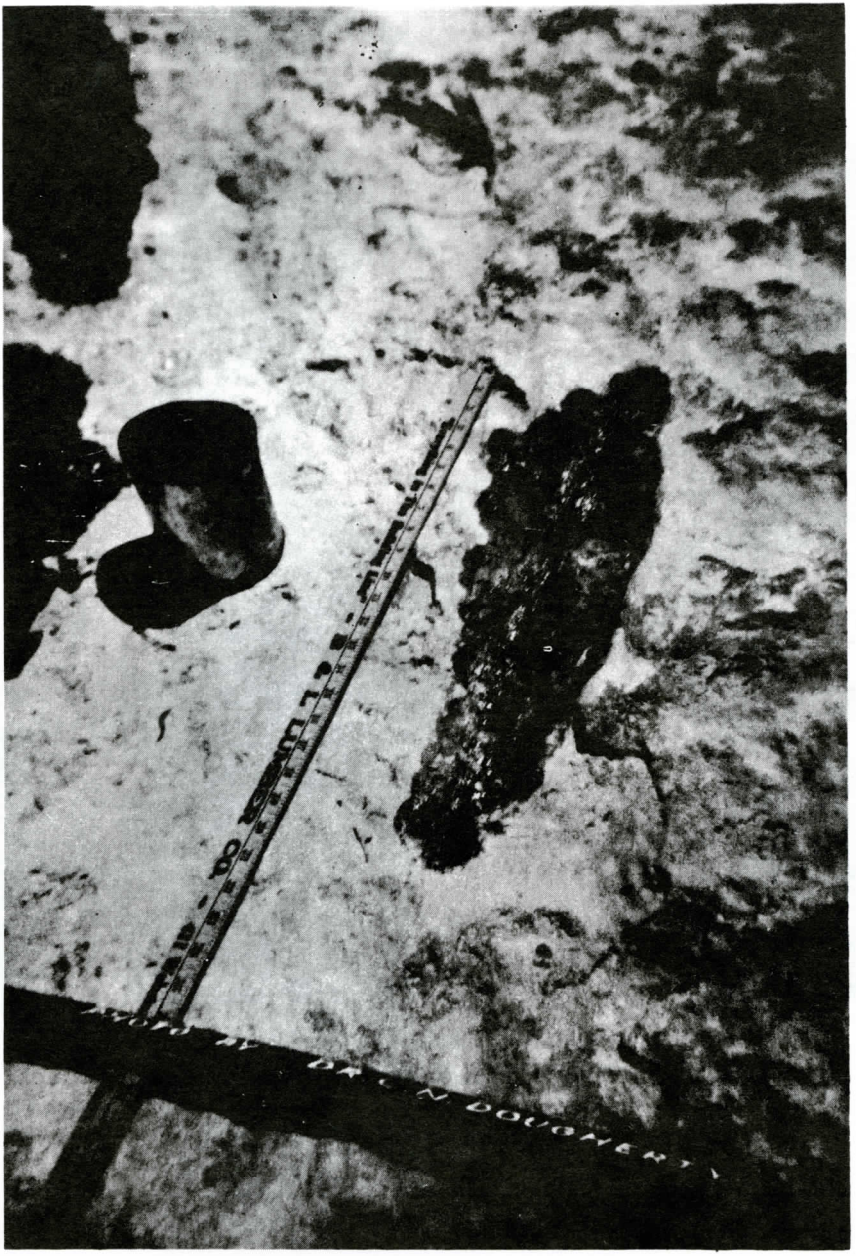
Imagine the incredible size of the men and dinosaurs that roamed the earth right here in our backyards of North Central Texas. Enjoy the journey as Cecil leads us into the past down the Paluxy!

It's my special privilege to write this introduction for our long time friends the Gibbs; G.C. and his wife Frankie. Together, our two families have experienced the joy of seeing Gods word confirmed in so many wonderful and incredible ways. His blessings, his healing, his protection and his guidance have been evident always. Let me ask you something friend. If Gen. 6:4 is true, how about the rest of Gods word? "Rom. 10:13" says whosoever shall call upon the the name of the Lord shall be saved. "Saved" means new life in Christ here on earth and eternity in heaven.

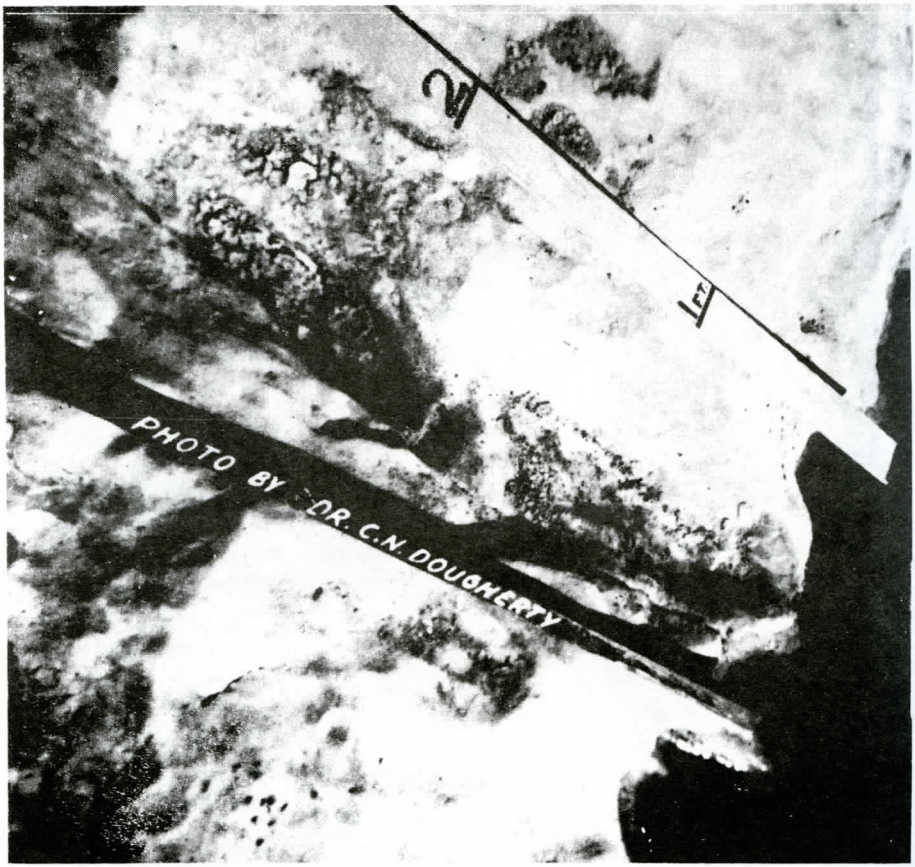
May God Bless You Richly,

Jeff Copenhaver

The world that then was, when men and dinosaurs walked together. These tracks were wet out for photographic purposes.



This giant man track picture was taken by Dr. Dougherty on July 10, 1971. The track was wet out for photographic purposes. You can see by the yard stick that the track measures twenty-one and half inches in length.



This is a giant man track which I did not clean out. There is also one track in which you will be able to see the big toe print and the heel print. This track also measures twenty-one and one-half inches and the tracks are going in the direction of "up" river.

THE VALLEY OF THE GIANTS

CHAPTER ONE

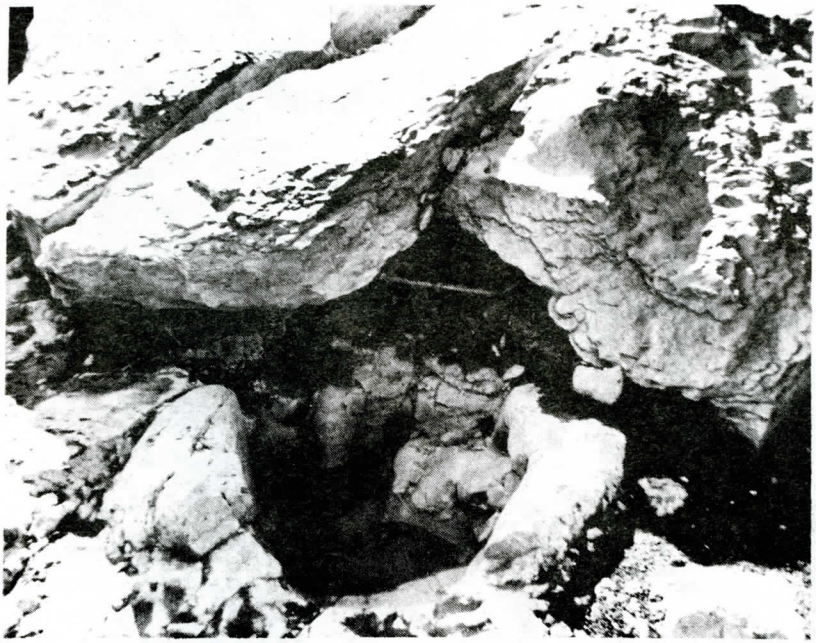
Seven years ago when I first moved to Glen Rose, Texas, I began hearing tall tales about the Giant tracks, the Giant animals called Dinosaurs. I also heard tales like, "way back when I was a boy, I saw these Giant Men tracks in the bedrock of the Paluxy River." And I would ask, "how large are these men tracks?" The old timers would measure off about eighteen to twenty-four inches with their hands. Then I would ask, "where are those tracks? I want to see them." And the best answer I could get was, " Ah! up the river a ways."

This was so indefinite that I began spending my day off, walking along the Paluxy River up river from Glen Rose, Texas, to try to discover these tracks of which I had heard vaguely.

For two years I photographed the Dinosaur tracks, the Brontosaurus tracks and the Trachodon tracks. But, I was never able to locate these Giant Men tracks.

One day while searching in what is now Dinosaur Valley State Park, I came upon the Giant Men tracks about fifteen feet from the most prominent Bronosaurus track. I photographed these tracks from every angle. The first track measured exactly twenty-one and one-half inches in length. From the heel of the first track to the heel of the second track is a stride of exactly seven feet. The second track also measured twenty-one and one-half inches and this one has a very clear toe print. These tracks belong to the Cenozoic Era. This area has now been made into Dinosaur Valley State Park and the tourists have walked over the tracks many hundreds of times, and they have about worn them out.

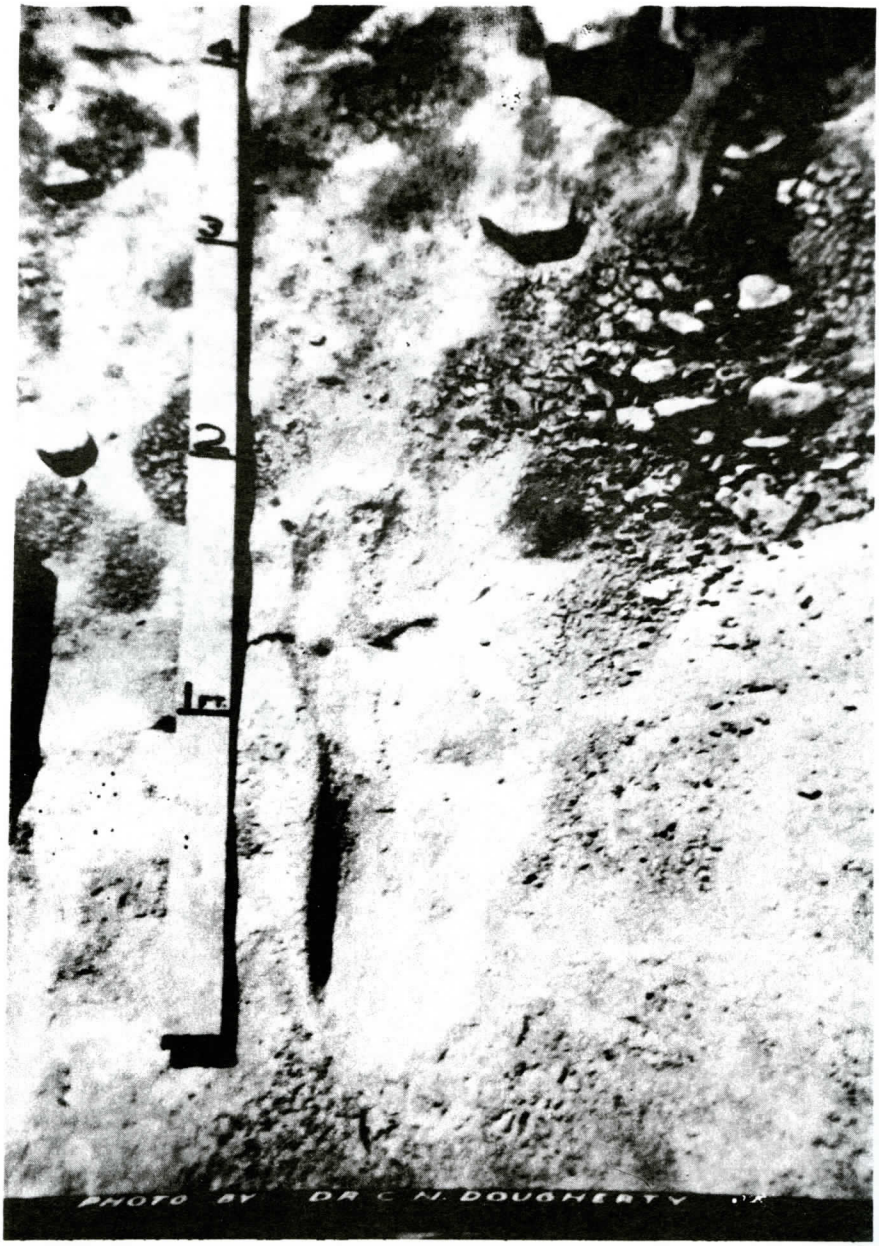
This man track holds 492 cubic centimeters of water. This track was filled with water for photographic purpose. The appearance shows water to seek it's own level. Group 2.



Brontosaurus track in Dinosaur Valley State Park. This track measures 25 x 36 inches; holds twenty gallons of water.

This photo made in 1970.

Photographing these tracks and writing about them is my avocation, not my vocation. You have read the story of the search for the Holy Grail and when it was finally found, it was found back home again. I have always thought that in order to search for tracks, bones or remains of Dinosaurs, one had to go to some far away places with strange sounding names, but, when I finally discovered these Giant Men tracks, they were right here at home.

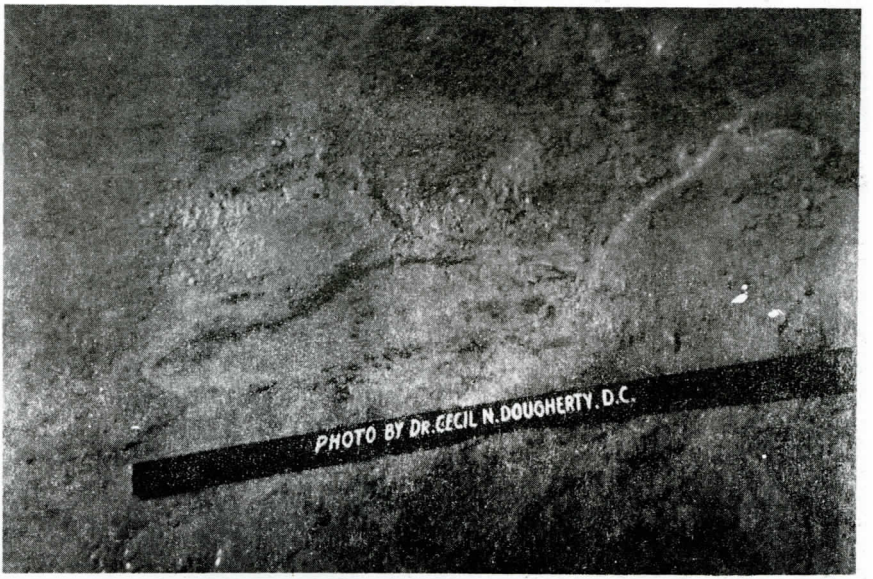


This man track is eight inches from a dinosaur track. The perimeter of this giant man track is very clear. Note where the mud squished between the big toe and the second toe. Also note clear print of instep. The heel print is two and one half inches deep in the bedrock. Group 4. This giant man track was not wet out.

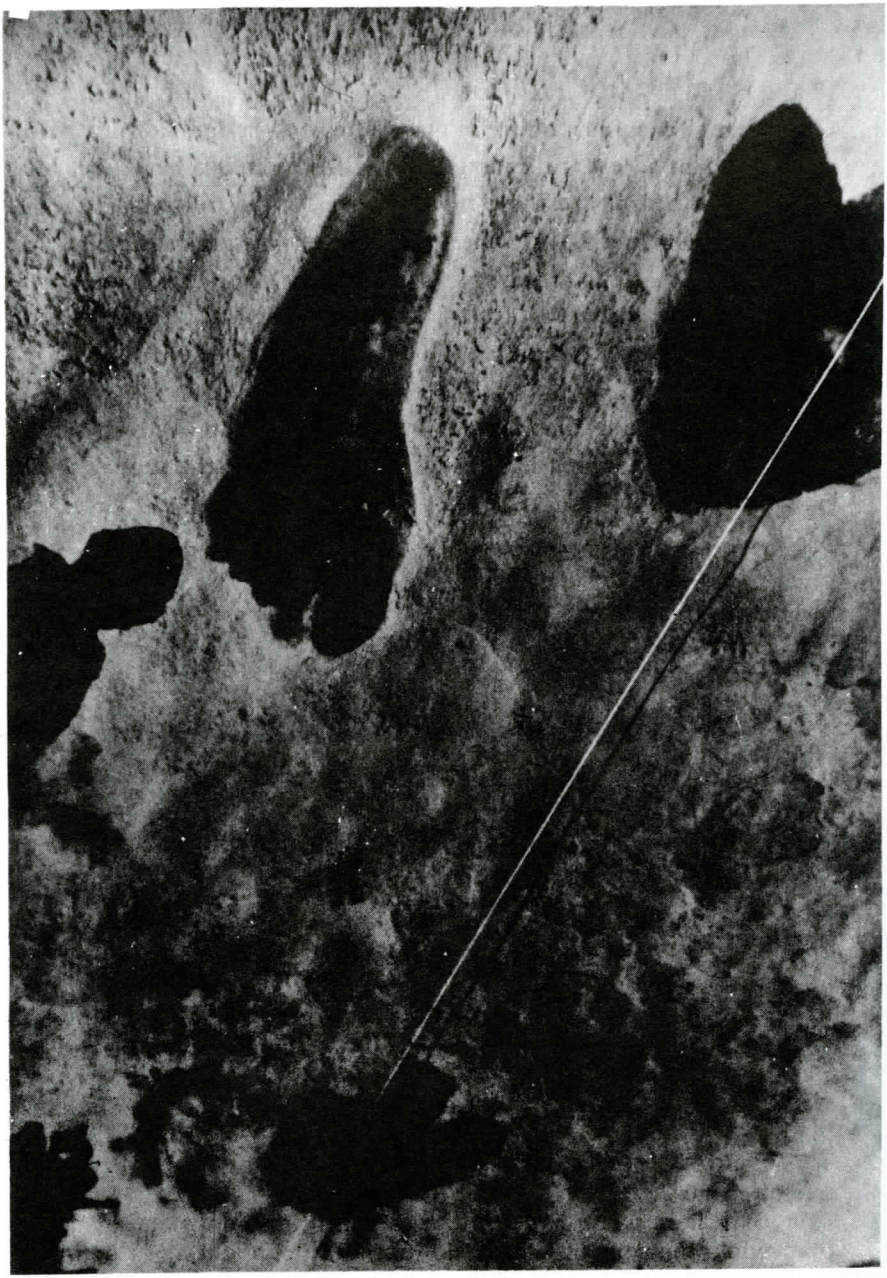
CHAPTER TWO

Glen Rose, Texas, just above Highway No. 144 bridge and just below the small dam across the Paluxy River, I discovered other Giant Men tracks. Photographs of these tracks appear in the following pages of this book. On July 9, 1971 the Paluxy River was almost dry, and by Sunday, July 11,1971, the river was completely dry. This made a condition favorable to hunting for tracks in the river bed. There was not one drop of water flowing over the dam in Glen Rose.

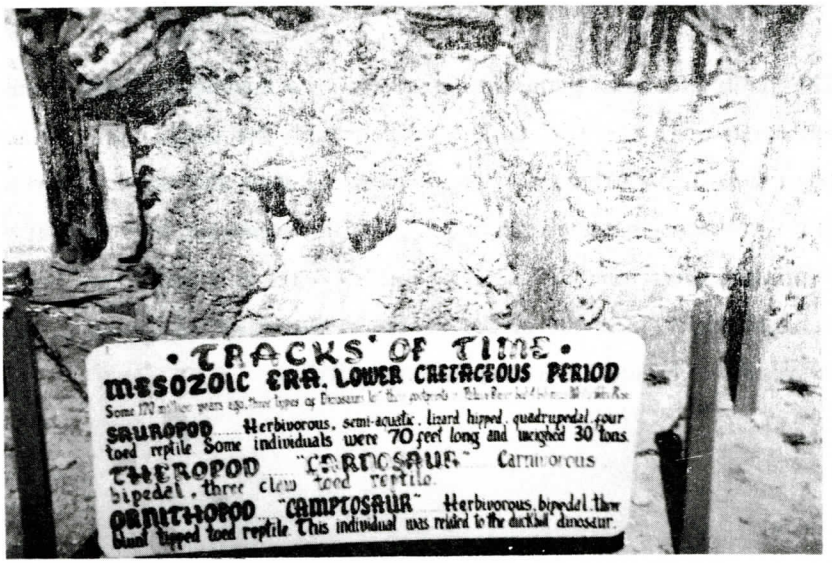
After photographing these tracks in Glen Rose, I moved up stream about two miles to what has always been known as the second crossing.



This picture was made at the second crossing in the Paluxy River. It is one of group 2.
Gen. 6:4 There were giants in the earth in those days and also after that, when the sons of God came in unto the daughters of men, and they bare children to them. The same become mighty men, which were of old, men of renown.



This giant man track appears to have been made at the same time as the dinosaur tracks and is the best track of the four groups. It is two and half inches deep in the bedrock of the Paluxy River. Group 4.



These pictures were taken of the same track;

CHAPTER THREE

About two hundred yards above the second crossing, in the middle of the river bed, I came upon a group of Giant Men tracks. These tracks were full of mud, sand and pebbles. I cleaned out some of these tracks and photographed them. The photographs appear in this book.

There are many three-toed Dinosaur tracks on this layer of rock. Four years ago when the Paluxy River was low, I photographed some three-toed Dinosaur tracks on this same rock. They have been chisled out and carted away. There is one track of which the chisel marks are in a circle around it but for some reason the thief abandoned the track. There are more than 25 Dinosaur tracks left in this group.

This book and these pictures represent a race that has vanished from the earth when the Dinosaurs vanished from the earth; when some great catastrophe wiped away almost all life from the earth. Why is this? We pose this question: The Dinosaur bones are found about a thousand miles Northwest of Glen Rose, Texas in a valley, scattered haphazardly all over the place. These dinosaur tracks appear in the Paluxy River bed in Somervell County in Texas.

This is one of the first and most distinct giant man tracks that has been photographed in Dinosaur Valley State Park. Group 3 - 1966.

CHAPTER FOUR

Then I moved upstream again past Dinosaur Valley State Park to another crossing of the Paluxy River, known as the fourth crossing. One hundred yards above this crossing there is a ledge of rock extending all the way across the river. This ledge of rock makes a very beautiful waterfall. I discovered this trail of Giant Men tracks leading back under the ledge of this waterfall. I have named this trail, "The Dougherty Trail". There are three Giant Men tracks at this location. Two of them are almost eroded away. There is one Giant Man track here imprinted in the bedrock of the Paluxy River which measures two and one-half inches deep (6.35 cm.) in the heel, measures twenty one and one-half inches long (54.61cm.), measures eight inches wide (20.32 cm.) across front part of foot and measures five and one half inches (13.97 cm.) across at instep. The heel and instep are well defined. The big toe and second toe are well defined and the oozy mud has squished up between the big toe and second toe and has solidified. Scientists and religious leaders are very much interested in this project and have spent thousands of dollars and untold hours of hard labor in the boiling sun and tremendous heat of the day, excavating, moving rock and stone to try to discover these tracks.

In this same location, same layer of rock etched in the limestone bedrock of the Paluxy River, there appears several trails of three-toed Dinosaurs.

These Giant Men tracks belong to the Mesozic Era because the clearest Man track is exactly eight inches from a Trachodon track and on the same layer of rock. In this same location, same layer of rock, there appears several trails of three-toed Dinosaurs. These Trachodon tracks are very clear and distinct. So clear and distinct in fact, that one trail shows a three-toed Dinosaur trail in which the middle toe of the left foot is missing.

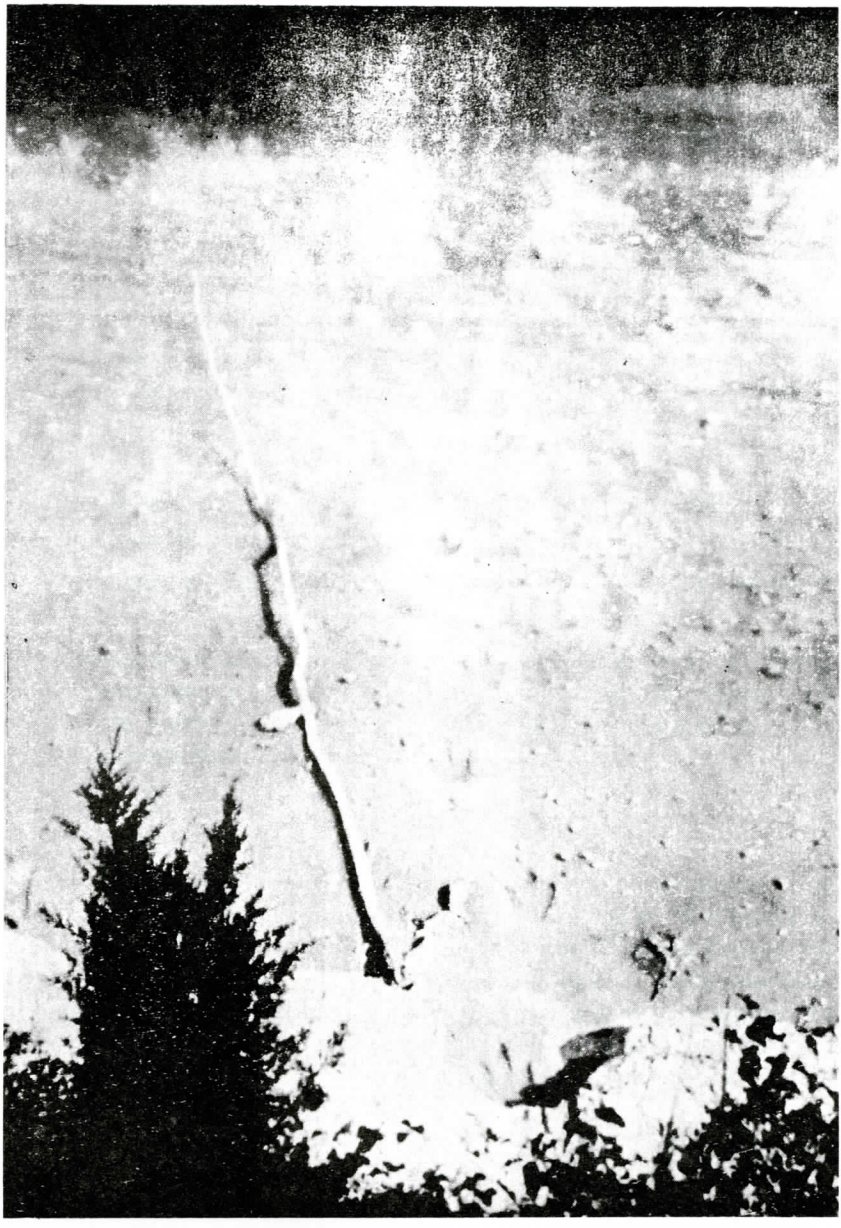
We dig into the crust of the earth trying to discover what tremendous secrets are hidden there.

Dr. Cecil Dougherty, in picture, Robert G. Cormack, Louise Cormack, and Ms. Don Purcell. Moved this ledge of rock lower R. and discovered a 3 toed dinosaur track in dark portion of picture. Excavated July 1974.

Today is August 18, 1971. A month ago there were two men exploring the surface of the moon. They found there a stone which they choose to call Genesis Stone, because they think this stone was part of the moon's crust, when the moon was created some four and half billion years ago. Imagine how these men were elated to make such a stupendous find.

When I discovered this trail of Giant Men tracks leading back under the waterfall, I had a feeling that it was one of the most important discoveries since the discovery of the Dead Sea Scrolls and the recent discovery of Noah's Ark on Mt. Ararat.

Then felt I, like some watcher of the skies when a new planet swims into his ken or like the hunter who found a lost trail. The Paluxy River which flows through Glen Rose, Texas in Somervell County, confluences with the Brazos River about three miles below Glen Rose. The Paluxy is the fastest flowing river in Texas. When the water is low, it is very placid and one of the most beautiful rivers in Texas, but when the floods come, then the Paluxy is most turbulent. It creates such a tremendous force that it washes away the rocks, the boulders and stones some of which weigh many tons. When these rocks washed away, they left the Dinosaur tracks exposed for everyone to see.



The Trail From Eternity.

SUMMARY

My working day is marked by pressures, emergencies and demands of all kinds and I am not able to spend all of my time in the study of the rocks and tracks in Dinosaur Valley.

I find that the early morning hours are most refreshing to go to Dinosaur Valley and as the poet says, "Brushing with hasty steps the dews away to meet the sun upon the upland lawn." I especially cherish the early morning hours when I can be alone and engage in a kind of self communion and marvel at the tracks and the rocks and how they were formed.

It is very peaceful there before the tourists arrive; you can gaze upon the Paluxy as it meanders away from the haunts of men through beautiful valleys and shaded glen; and winds its way on down to the sea.

Evolutionary Scientists have claimed that the Dinosaur tracks were put down there a hundred million years ago, and here appears these Giant Men tracks which measure 21½ inches in length with a stride of 7 feet. . . right next to the Dinosaur tracks in the same layer of rock!!!

Then it makes one ponder on just what are the secrets of the Universe and the Earth! What was it like before and during the time these foot-prints were made??? How long ago??? Billions of years??? Or only a few thousand years??? What was it like before the great flood that changed the topography of the earth to what it is today??? How great is our Creator-God, who does all things according to His plan and purposes, and who loves and cares for His own!

*Time: is Calculated According to the Archaeologist Time Table.

We have a curiosity about the people and the animals that have lived on the earth before us so we dig into the crust of the earth, searching for signs of men and beast. We search for bones and tracks and any remains of a vanished race. We think and ponder on what tremendous secrets are hidden in the crust of the earth which we now inhabit. We know there has been more than one race of men on the earth and that some were Giant Men.

Deut. 3:11 "For only Og king of Bashan remained of the remnant of giants; behold his bedstead was a bedstead of iron; is it not in Rabbath of the children of Ammon? Nine cubits was the length thereof, and four cubits the breadth of it, after the cubit of a man. (14 ft. x 6 ft.)

Joshua 13:12 All the kingdom of Og in Bashan, which reigned in Ashtaroth and in Edrei, who remained of the remnant of the giants, for these did Moses smite, and cast them out.

Joshua 15:8 And the border went up by the valley of the son of Hinnom unto the south side of the Jebusite; the same is Jerusalem, and the border went up to the top of the mountain that lieth before the valley of Hinnom westward, which is at the end of the valley of giants northward.

Joshua 17:15 And Joshua answered them, if thou be a great people, then get thee up to the wood country, and cut down for thyself there the land of the Perizzites and of the giants, if mount Ephraim be too narrow for thee.

Joshua 18:16 And the border came down to the end of the mountain that lieth before the valley of the son of Hinnom, and which is the valley of the giants on the north, and descended to the valley of Hinnom, to the side of Jebusi on the south, and descended to Enrogel.

CONCLUSION

I came not to disprove what others have spoke but I came only to speak what I do know.

Shakespeare

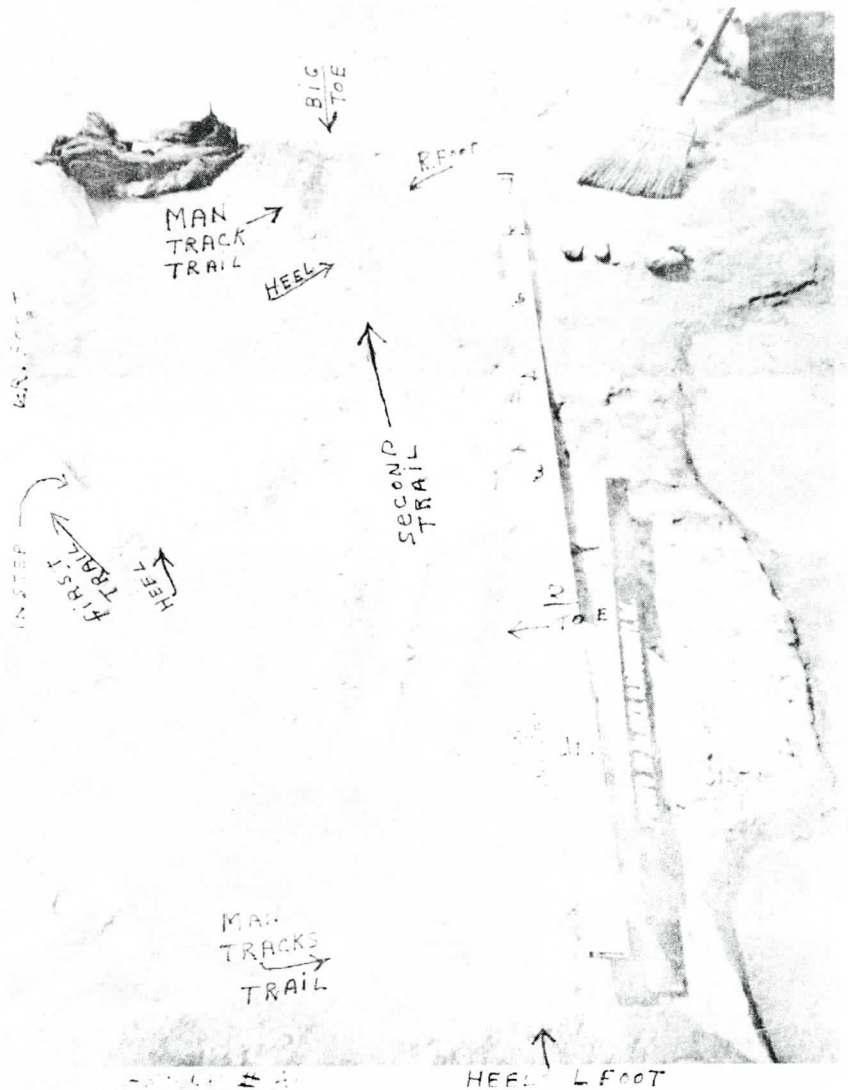
In this book I have not
conjectured what I have
heard so to be
But have written only
what I know so to be.
These tracks which I have
described to you
and which you have seen the
photographs are
GIANT MEN TRACKS.

The tracks shown in the photographs in this book can only be seen when the water is very low.

"THE DOUGHERTY TRAIL"

OF GIANT MAN TRACKS IN BEDROCK OF THE

PALUXY RIVER, SOMERVELL COUNTY, TEXAS



There are two separate trails of giant men in this picture. There is a dinosaur trail only 8 inches from the man track at left marked (First Trail).

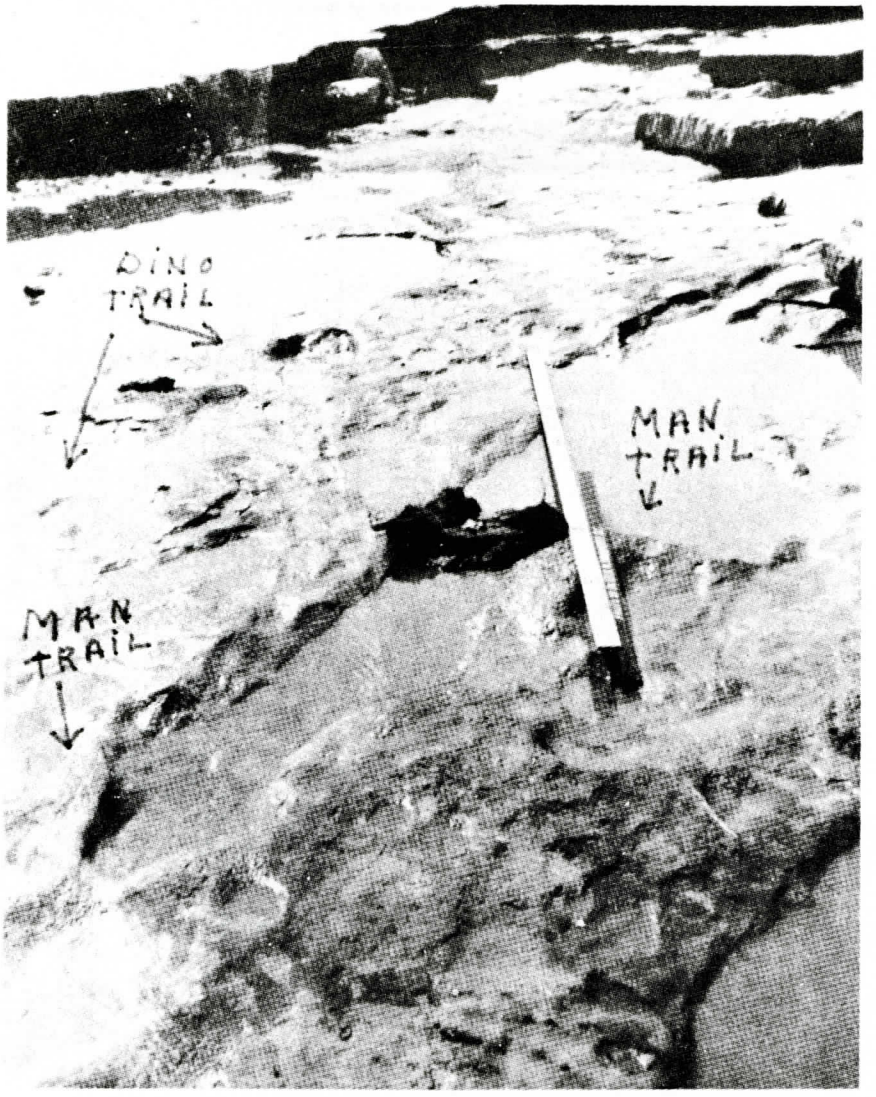
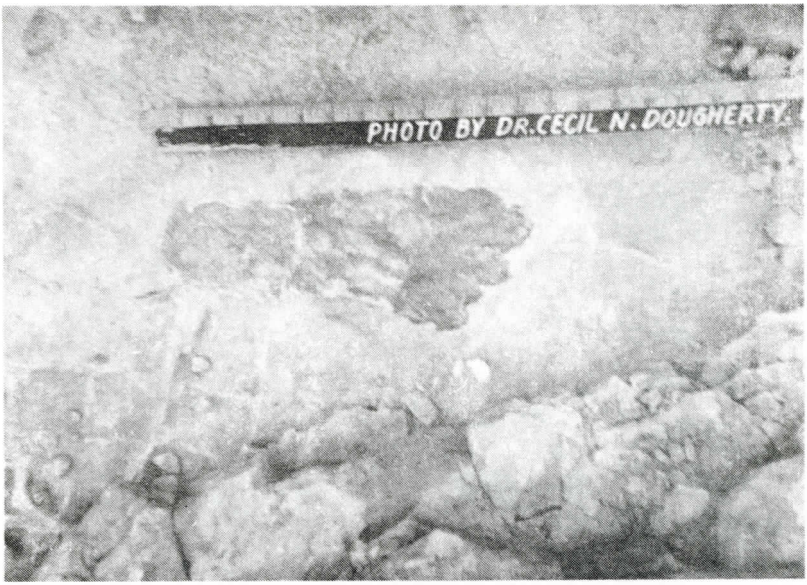
Giant animal tracks located in Dinosaur Valley State Park.

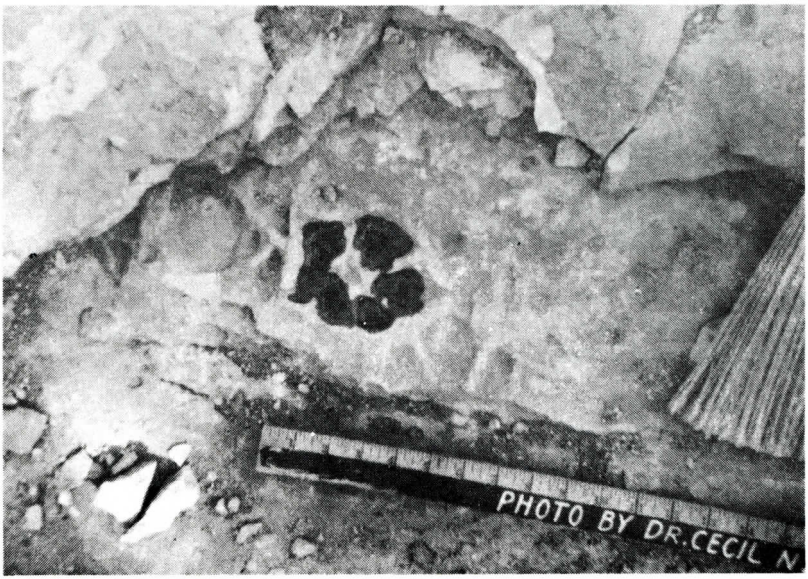
Recently uncovered dinosaur tracks - Dinosaur Valley Park.



Two groups of the giant man tracks are imprinted on the same layer of rock as those that have long been established as dinosaur tracks.



Giant HUMAN track made in Cretaceous rock in bedrock of Paluxy River Glen Rose, Texas



Dog track in cretaceous rock. Located at ford #2 one meter from a huge 3 toed Dinosaur track (Picture) 1980 Jeannie Mack Farm.

This picture was taken in August 1934 by Charles C. Moss. These dinosaur tracks were found by Charles C. Moss and his brother William Boone (Grandy) Moss.

1973

A SUPPLEMENT TO THE VALLEY OF THE GIANTS

The Glen Rose layer is a message in limestone. Each little layer is a fragment that builds up into a monument of stone and each layer is like a page in a book that eloquently tells the story of Creation.

HIS works remain here in the bedrock of the Paluxy River.

The Giant Men tracks, the tremendous animal tracks tell of time and place. A casual glance will tell you nothing. If you have the patience of JOB to study these pages of time (not in days or months but in terms of years) then there will be revealed to you things that have been.

The Paluxy River bed houses more history in infinite variety than any spot on earth of equal size. Posterity will uncover even more tracks, for men will come in search of PROOF that Man and DINOSAUR did walk the earth at the same TIME.

Ample proof is here legibly written in layered limestone for anyone to see who wants to see.

The hieroglyphics that one can read of life before now, of CREATION, of what is and what has been. The giant men tracks and the dinosaur tracks in same layer of rock are a Crytogram of Authenticity.

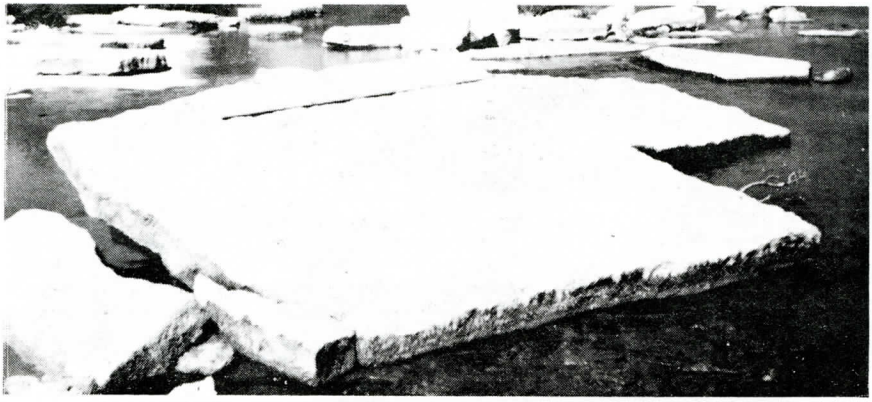
Brontosaurus

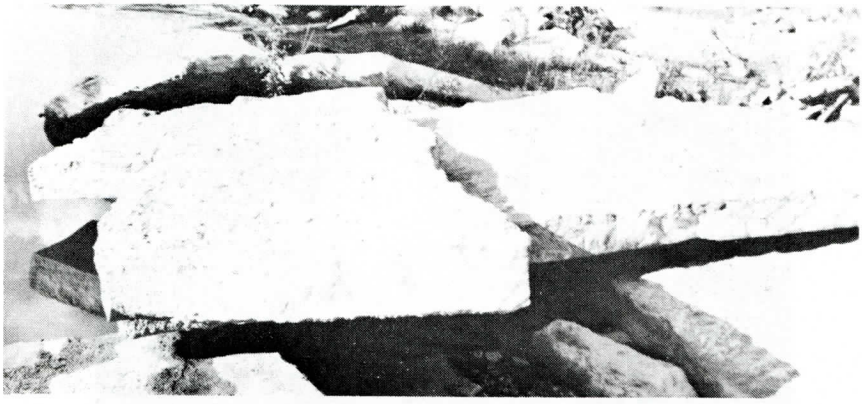
Brontosaurus tracks

Top: Toes, heel, and instep are clear. These men tracks are in Dinosaur Valley Park.
Bottom: Name of this dinosaur is unknown.

When the floods come then the Paluxy is most turbulent, it creates such a tremendous force that it washes away the rocks, the boulders and stones, some of which weigh a ton or more. By scientific examination we found this stone in picture to have a specific gravity of 2.65. It contains 60 cubic feet. By mathematical calculation this stone weighs 9,900 pounds. This stone was washed to this point from further up stream. 1973 flood washed another stone half this size up on top of the stone in this picture.



This 9,900 pound rock washed to this point from further upstream. Most likely this erosion had its beginning at the margin of a fault line near this place. 10 feet x 9 feet 8 inches thick



This is the same rock shown above. Note that 2½ ton rock washed up on top by the winter flood to demonstrate the power of the floods.

1973
PALUXY REPORT
By Robert G. Cormack

The week of July 2nd, 1973, was spent on the Paluxy River with agreater part being at a point 97 degrees, 49 hours and 18 minutes Longitude and 32 degrees, 51 hours, and 48 minutes Latitude.

At this location we observed three trails, two of which are not dinosaur.

The two trails which we will refer to as "Dougherty Trails" crossed at our point of observation with one at a radial of 135 degrees and the other at 160 degrees.

The Dinosaur trail was on a 150 degree heading.

Surveyor determines the exact direction of the man trails and the Dinosaur trail.

In spite of the eroded condition of the "Dougherty Trail" there is little doubt as to what the tracks look like. The frustration of our recognized paleontologists is not over what they appear to be, but as to how it could possibly be. Are they man made forgeries as was the "Piltdown Man"? Were they made by a dinosaur with a foot like a man, or did man and the dinosaur really co-exist as the Bible states? (Genesis 1:25-27 and Job 40:15 to 41:2)

Neither you nor I had the privilege of observing the feet as they were making the impression now in question, therefore our decision will have to be based on either what some paleontologist claims or what another group and the Bible has to say.

I cannot prove what I believe, but I do accept as fact that man and dinosaur were contempories.

Many of my friends both Christian and agnostic wonder about my concern about the theory of creation and paleontology.

Well, in the last few generations the theory of evolution has progressed from the teaching it as a theory to teaching it as a fact, and now to the point that those who would like to consider the theory of creation are called unlearned, ignorant and religious fanatics.

For sometime now, I have been checking fossil evidence both in our museums and in the field.

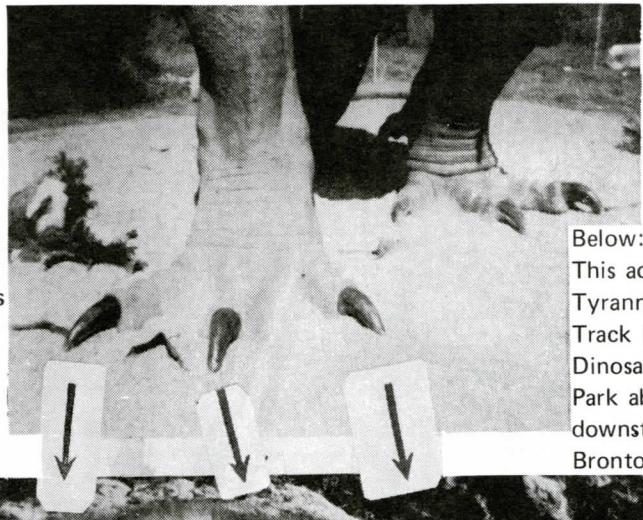
From the artic circle to Mexico and from California to the British Isles, I have seen nothing to discredit the record of Genesis.

Present science textbooks say that man evolved some 60 to 120 million years after the extinction of the dinosaur. The creationist says that the fossil evidence and the Bible record shows that man and the dinosaur were contempories.

Therefore if the "Man Prints" are authenticated our present textbooks will join the ranks of Dawson and his "Piltdown Man" and once again our schools will teach students to learn from what they observe and to analyze all of the evidence rather than to sort the evidence in a manner to prove a theory.

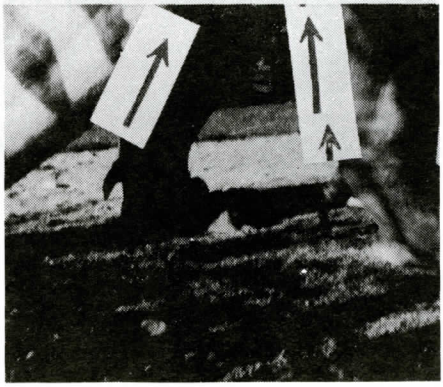
Robert G. Cormack

Dinosaur Tail Drag.



Life size replica of Tyrannosaurus Rex located in Dinosaur Valley State Park.

Below: This actual Tyrannosaurus Rex Track is located in Dinosaur Valley State Park about 100 yards downstream from the Brontosaurus tracks.



This Tyrannosaurus Rex track is located in Dinosaur Park. Arrows point from each of the toes toward the actual toe prints. Bottom picture, arrows point from spur toward the actual spur print. Rex track measures 4 ft. across each way.

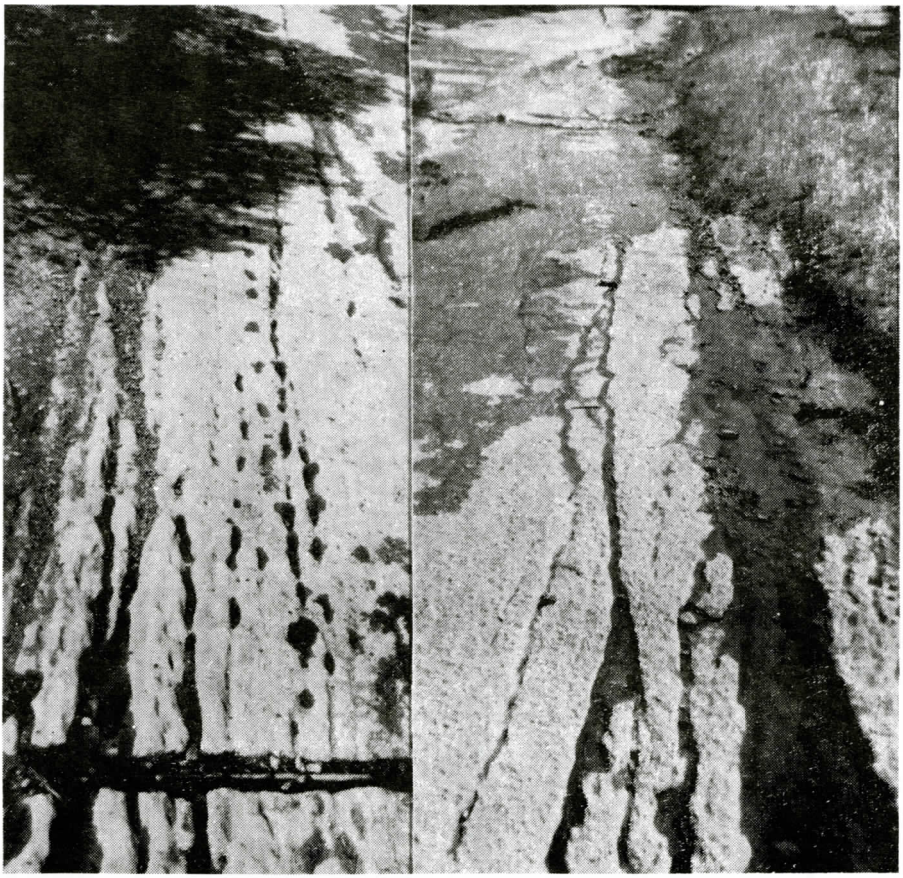
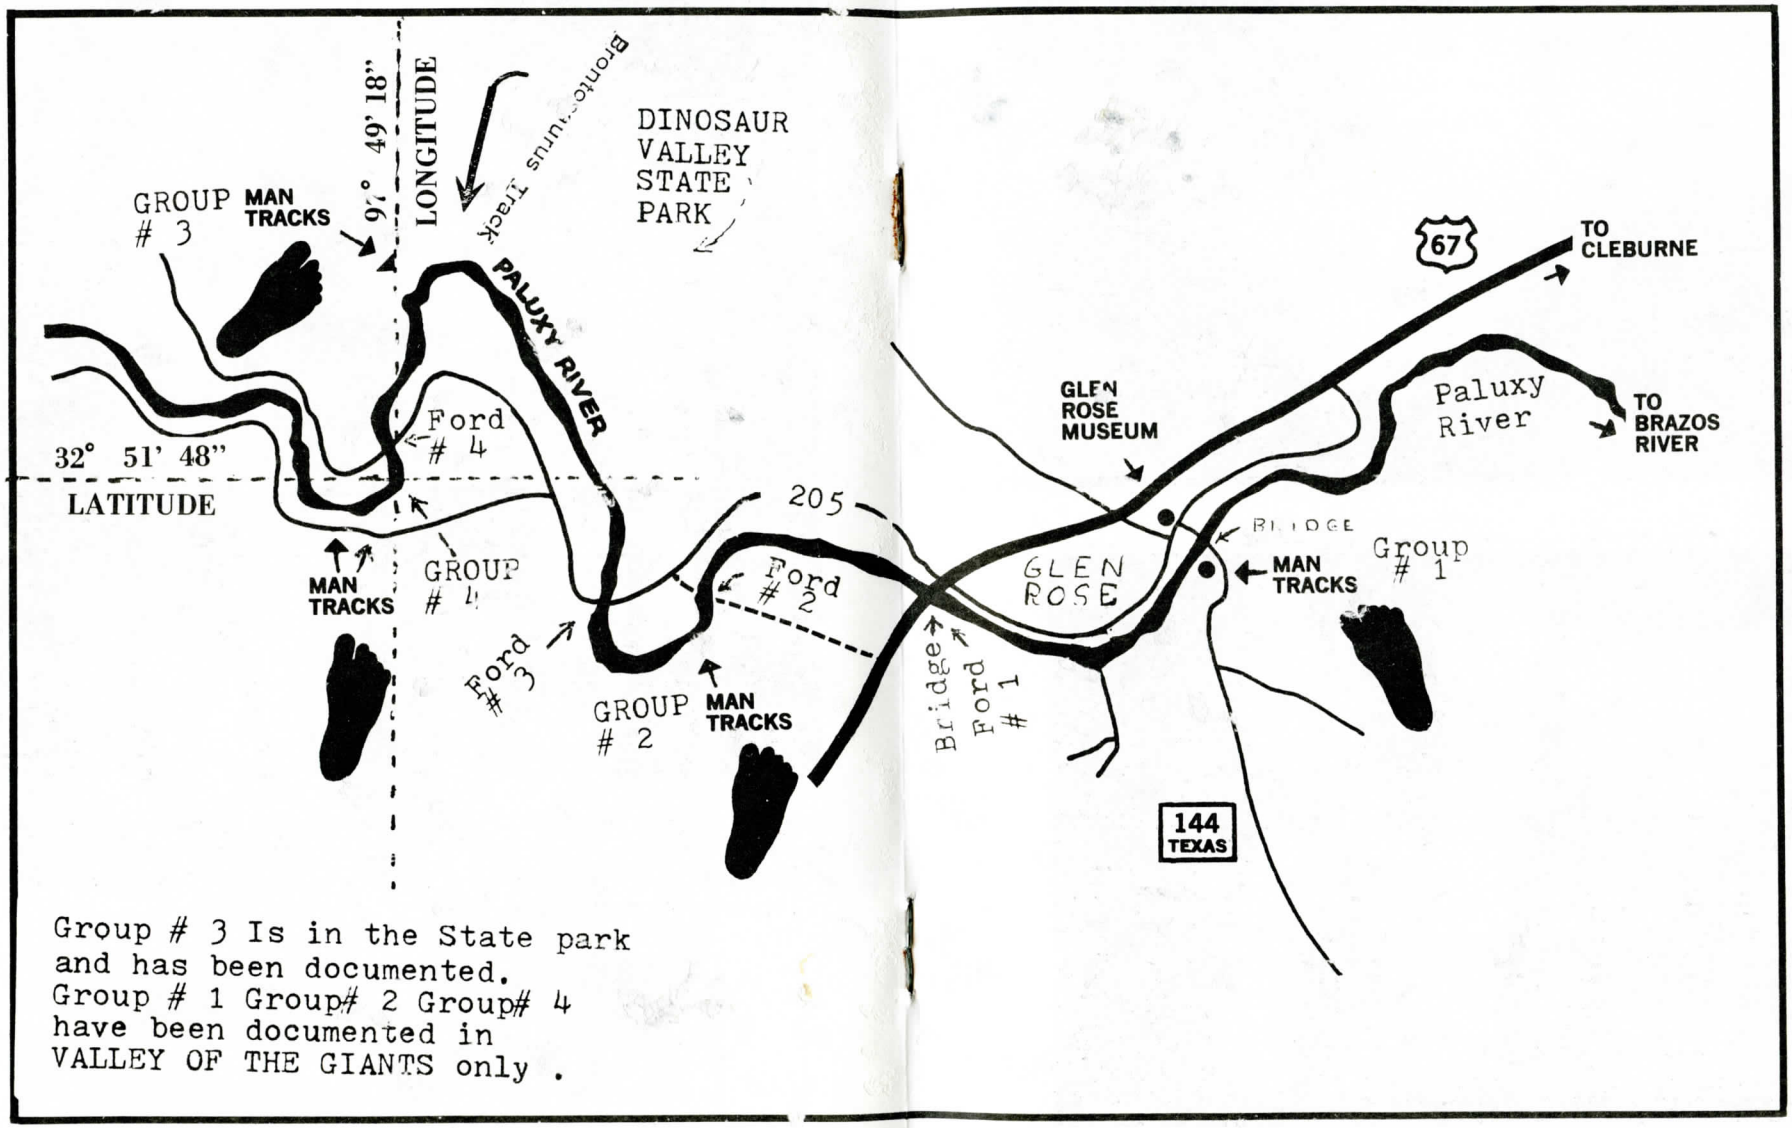
Bottom: Giant track discovered by Curtis Sherrill on July 4, 1974. Photo By Curtis Sherrill



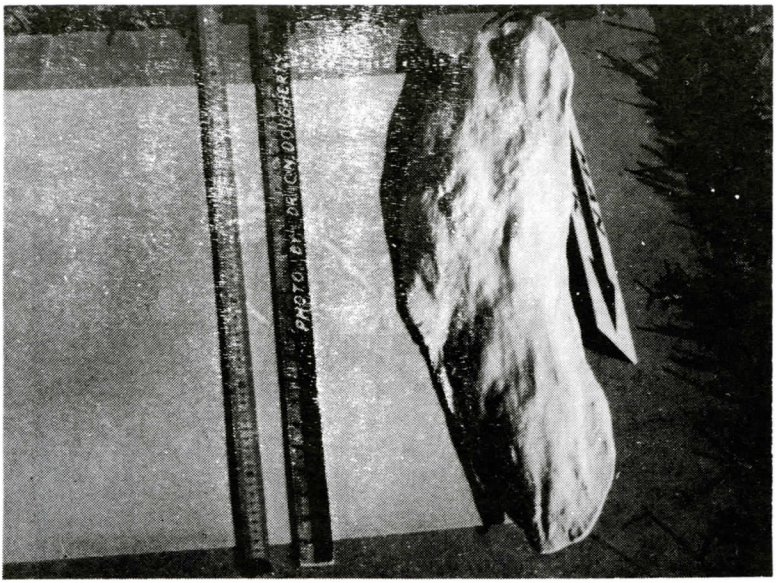
The picture on left shows a trail of man tracks going in direction of up stream. The picture on right shows erosion marks in the limestone bedrock of the Paluxy River. It is impossible to mistake erosion marks for trails of men tracks.

"THE DOUGHERTY TRAIL"

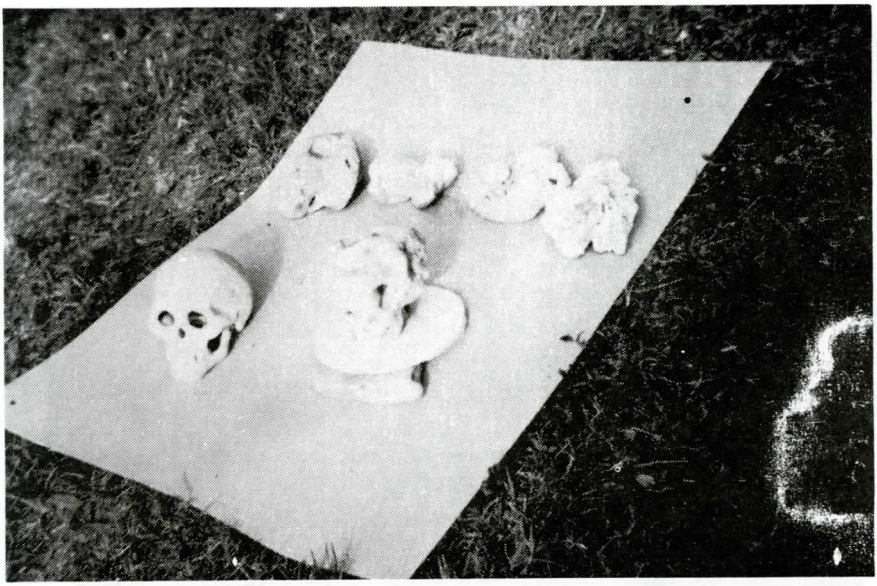
OF GIANT MAN TRACKS IN BEDROCK OF THE PALUXY RIVER, SOMERVELL COUNTY, TEXAS

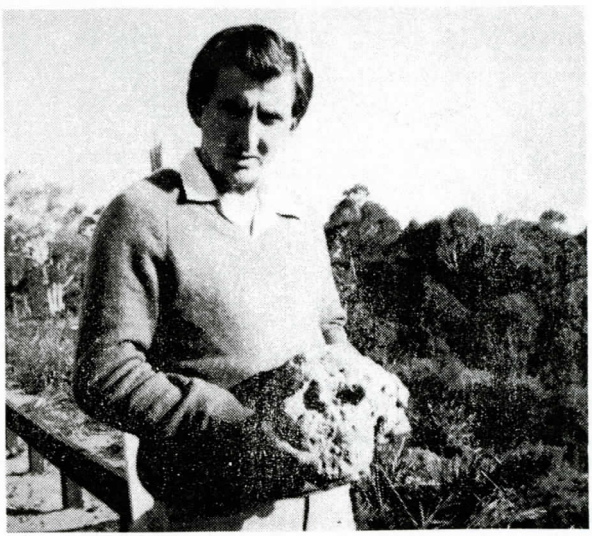


THIS IS AN OUTLINE OF THE PALUXY RIVER AS IT FLOWS THROUGH GLEN ROSE, SOMERVELL COUNTY, TEXAS. THE LOCATION OF FOUR GROUPS OF GIANT MAN TRACKS HAVE BEEN DESIGNATED. TWO GROUPS OF THE GIANT MAN TRACKS ARE IMPRINTED ON THE SAME LAYER OF ROCK AS THOSE THAT HAVE LONG BEEN ESTABLISHED AS DINOSAUR TRACKS.

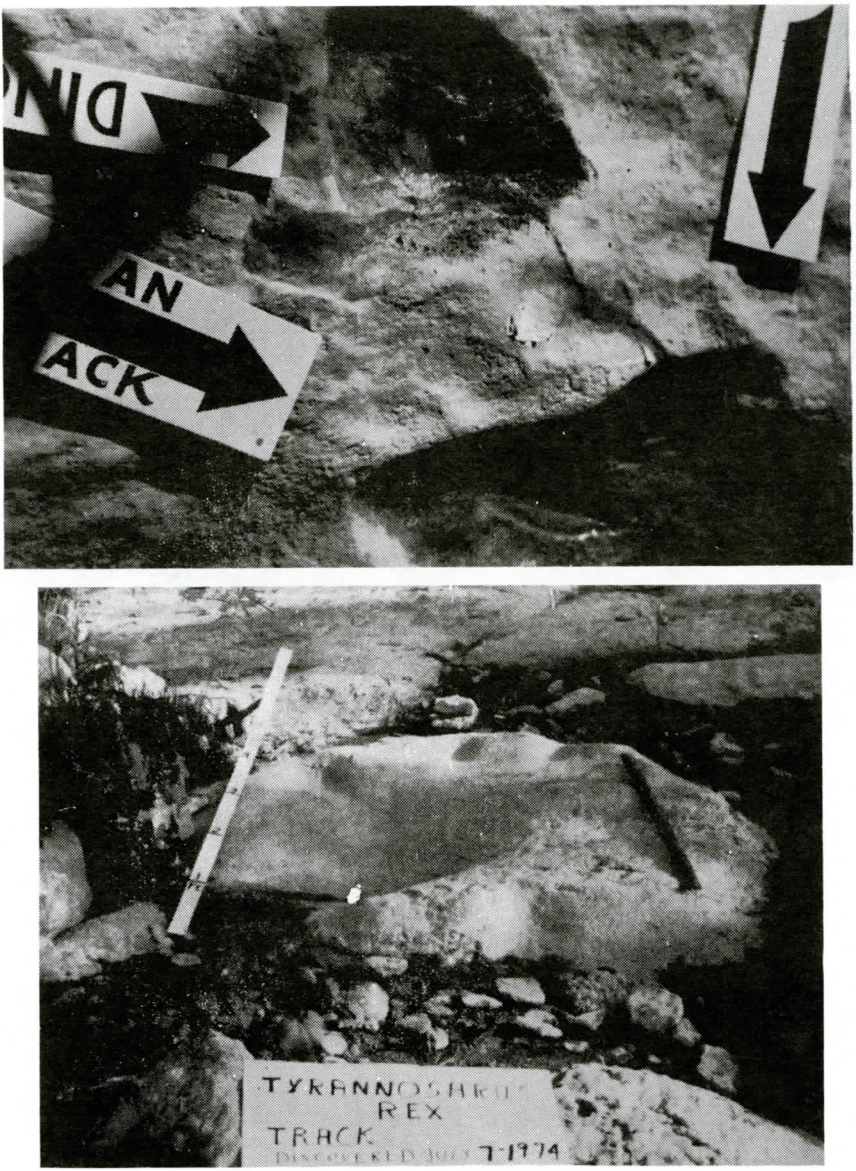


Making a plaster cast of giant man track in the bedrock of the Paluxy River. Cast shows toe print very clear.





Dr. Rex Gilroy, Director of Mount York Museum in Australia, holds a skull which he discovered near some brontosaurus tracks there. Top: Vertebra and a sacrum (upper row) plaster skull (for comparison) and a skull found near brontosaurus tracks, Glen Rose.



Top: Giant man track and dinosaur track only eight inches apart.
Bottom: Very clear Tyrannosaurus track.

PALUXY REPORT 1974

Time of this writing: February 14, 1975
Place of this writing: The Big Flat Rocks in the Paluxy River.

This book to this point has been purely scientific. Since it has now been proven, beyond all reasonable doubt, that these tracks are in fact Man tracks, it is time to elaborate on these facts and record them in this book.

First, I will record some new discoveries which were made in the summer of 1974. The Paluxy River went dry on July 4, 1974 and stayed dry, no flow, for forty days and nights. This gave me the time to look in the river bed for additional Dinosaur tracks and Man tracks and to measure and photograph them.

Curtis Sherrill of Jefferson, Texas discovered a good Man track at the fourth crossing just below the waterfall, going in the direction of down stream. This track measures twenty-one and one-half inches long, eight inches across wide part of the foot and five inches across the narrow part of the foot. I have photographed this footprint and also made several plaster casts of it.

The remarkable, yet unfortunate reception to these discoveries is from people who have merely heard of them but have made no effort to come to the Paluxy River bed to examine the tracks and learn more about them. They go so far in acknowledging the findings of people who have studied these tracks for years and years, by saying, "We don't recognize them as being Man tracks." Others offer weird and varrying explanations as to what they are. Some say the stream of water eroded out a place in the river that closely resembles a Man track. They make no concession whatsoever to the fact that there is at least a dozen near perfect Man tracks in the river bed in the seven mile span going upstream from the river bridge at Glen Rose. In these seven miles there are many, various Dinosaur tracks along with the Man tracks and the apparent Men trails. Had the stream of water washed out the tracks in this peculiar fashion, why is it then that these Man tracks measure exactly twenty-one and one-half inches? Why is it then that some of the tracks are going up and down stream with the flow of water, some of them are going at an angle to the stream and some are going in the direction of down stream? These are unanswered questions.

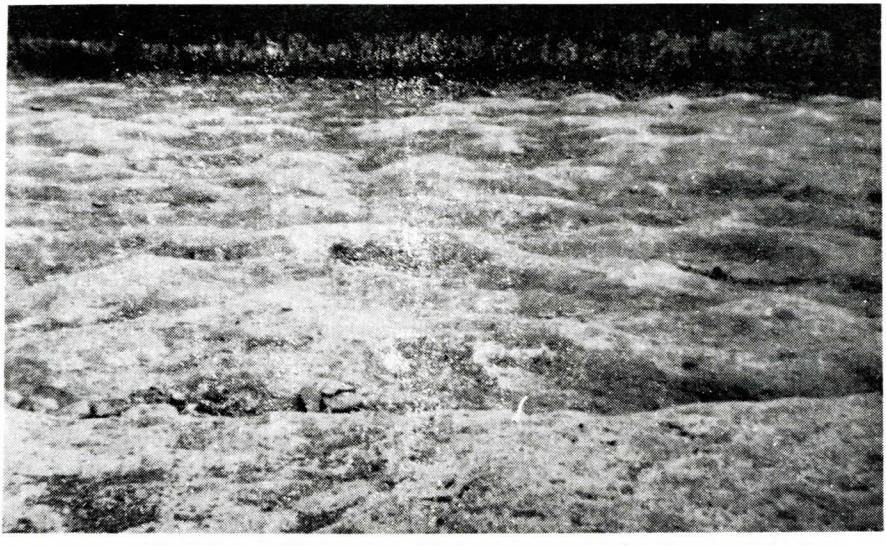
Many people offer the supposition that the Indians attached some religious significance to these tracks and had scratched them out with a sharp stick. Why would the Indians have removed the six inches of flagstone, the twelve inch marl layer, down to where the Dinosaur tracks and the Man tracks are, only to scratch out these peculiar tracks all of exactly the same length and breadth and then replace the layers of marl and flagstone back on top of these tracks?

Scholars offer the explanation that these trails are caused by the movement of the river. As the top of the water appears to be wavy up and down, so then would the lower layer of water follow the same pattern, creating these trails in the river bed. Why is it then, when you measure the stride of these tracks in the trails at different points in the river they all measure exactly the same?



This picture shows bed of Paluxy River. This design is caused by waves in the river and has no resemblance of man tracks or dino tracks.

There is a place half mile above Highway 144 Paluxy river bridge crossing that when the river is dry you can plainly see how the waves did erode the bottom layer of rock in the river bed. But there is no resemblance of a trail of either man or beast. When approached with this information, I inspect the areas, measure and photograph these historic foorprints. I am convinced there is no way they could have been made by other than a Giant Man stepping in the soft mud which later hardened and has been preserved until the present time. The tracks are still here in the middle of the Paluxy River and are very clear in the bedrock of the river bed.

Sometimes people ask me, "Well, how did those tracks get there in the first place?" They believe the area was covered with molten lava and cannot understand why it did not burn the feet off the people and Dinosaurs when the tracks were made. This is not so at all. This countryside was at one time the bottom of the ocean. As the ocean receded this particular place here at Glen Rose was a bog, Covered with water of different depths. It is believed the strata at the edges of the marsh where the Dinosaurs and Giants waded was a composition of lime and clay similar to a mortar now used between bricks and stones. The tracks were probably made in shallow water of no more than two feet in depth. As the water receded and the lagoon dried, the tracks became solid like cement similar to the mixture used in making walkways and sidewalks.

In time, possibly from rains or some movement of the earth's surface, the tracks filled with mud, in some places to the depth of a foot or more. This is the layer of marl which we now find. When the sand covered this layer of mud it formed the layer of flagstone which has protected these tracks all of the centuries they lay dormant.

Some upheavel or possibly a stratesphere disturbance started the river flowing. The six inch layer of flagstone broke into small cracks, the river flowed into the cracks until there was enough space for the flood waters to wash away the flagstone.

After the flagstone was washed away, it was an easy process to wash away this layer of marl as it is so soft it can easily be picked out. When these two layers were removed, this exposed the Man tracks and Dinosaur tracks so they may be seen. They are for most part located in the middle of the river and most of the year are covered by water.

In observing an aerial map of the Paluxy River above Glen Rose one will see a fault line that runs along side the river. This fault line is up stream from Dinosaur Valley State Park. It runs along the river at the McFalls home. There is Dinosaur tracks on this ledge about fifteen feet above the river bed. There is also Dinosaur tracks and several trails of Men tracks in the river bed at this location. Some of these Men tracks measure sixteen or eighteen inches in length.

Because of this fault line, the current of the river had a starting place from which to tee off. As it gathered momentum and at times reached flood stage, it was easy for the swift current to wash away first the flagstone then the mud or marl layer. This exposed the Dinosaur tracks and Men tracks. These tracks can still be plainly seen and I have taken many photographs to authenticate this statement.

Photo by Floyd M. Gurley. This track was found in Kansas.

1975 PALUXY REPORT

This completes the tenth summer that I have searched and researched the Paluxy River bed for ancient man tracks and dinosaur tracks and other tracks. Considerable more interest has been shown this year than any one year before the present time. Mr. Robert G. Cormack came from California on July 4, 1975, and made aerial movies of the Paluxy River from Glen Rose and also movies of the men tracks and dinosaur tracks from close up.

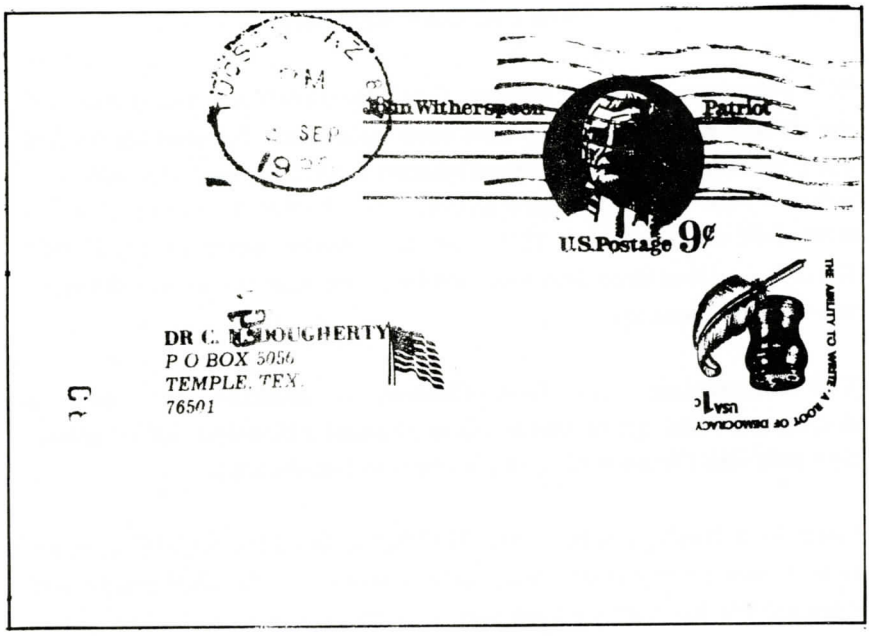
The cameraman came from Channel 2, Houston and made a documented film which was aired on Channel 2 Houston, KPRC television and also Channel 12 KSAT television San Antonio.

Erich Von Daniken author of "CHARIOTS OF THE GODS" sent his cameraman from Europe and made a movie of the men tracks and dinosaur tracks that you have just read about in Valley of the Giants.

This movie will be used as a continuation of "Chariots of the Gods". Also the same pictures in "Valley of the Giants" will be used in Mr. Von Daniken's book "Von Danikens Proof" in which one chapter is about my men tracks and Dinosaur track as shown in this book.

John Morris, author of "Adventures on Mt. Ararat" came to examine the man tracks in the Paluxy and will write a paper about the man tracks for "Acts and Facts", a paper published by Institute for Creation Research, San Diego, California.

Institute for Creation Research sent Dr. Harold Slusher accompanied by Dr. Clifford Burdick to the Paluxy River to examine the Men tracks and Dinosaur tracks in the bedrock of the Paluxy River, Somervell County Texas this summer. The reports as referred to on pages 49A & 49B.



924 N 6th Ave, Tucson, Arizona, 85705

Dear Doctor ;

Thanks for a copy of your good book on the Glen Rose tracks. As for the one that is in question, on page 4. I think it was the one you first showed us near that crossing, that was slightly under water at that time. There was no question in my mind that it is a genuine track, and your photo of it in your book certainly shows it up as a human track. For some strange reason certain people, mainly evolutionists are reluctant to admit it can be human.

Best Wishes, A. L. Burdick

Dr. Cecil Doughtery, D. C.
1501 E. Adams Ave.
Temple, Texas 76501

Dear Dr. Doughtery:

In regard to the tracks Dr. Clifford L. Burdick and I studied in the bedrock of the Paluxy River during the summer of 1975, I firmly believe the shape, distribution, size, etc., of these tracks indicate that they are truly man tracks. I believe the Paluxy River tracks described in your book, VALLEY OF THE GIANTS, provide scientific evidence that men and dinosaurs existed contemporaneously. In particular, the track at spot 4 seems very good evidence.

With best regards.

Sincerely,

Harold S. Slusher

HSS/idc

Scientists may never be able to prove, to everyone's satisfaction, that these men tracks were actually made by a Giant Man walking in the mud here at the same time the Dinosaurs made their tracks here.

I am totally convinced they were, because no one has ever been able to prove they were not.

> There is a principle which is a bar against all information which is proof against all arguments and which cannot fail to keep man in everlasting ignorance. That principle is condemnation before investigation.

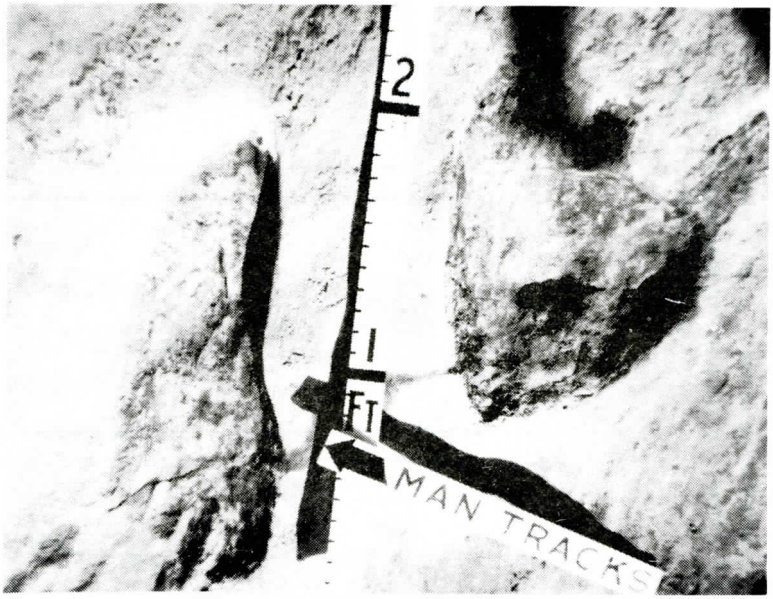
MODERN MAN

Gene

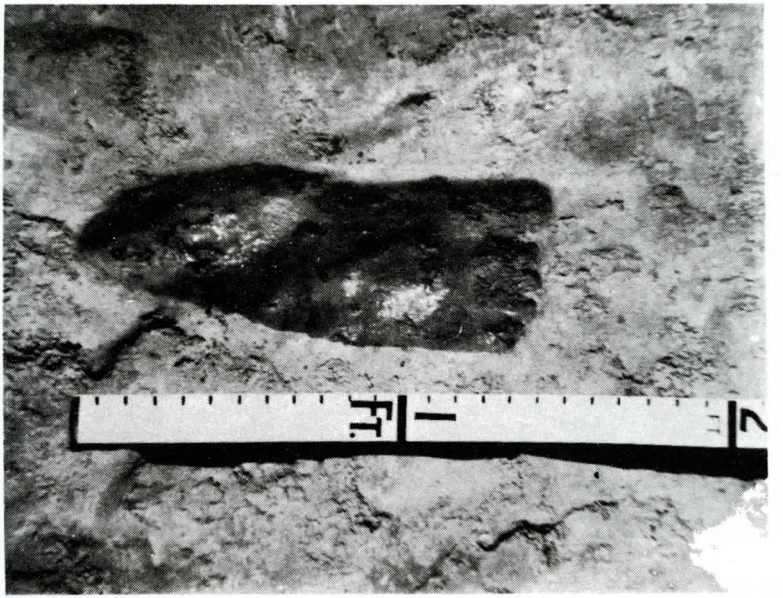
A hereditary germinal factor or unit in the chromosome which carries a hereditarily transmissible character.

Dorland Medical Dictionary



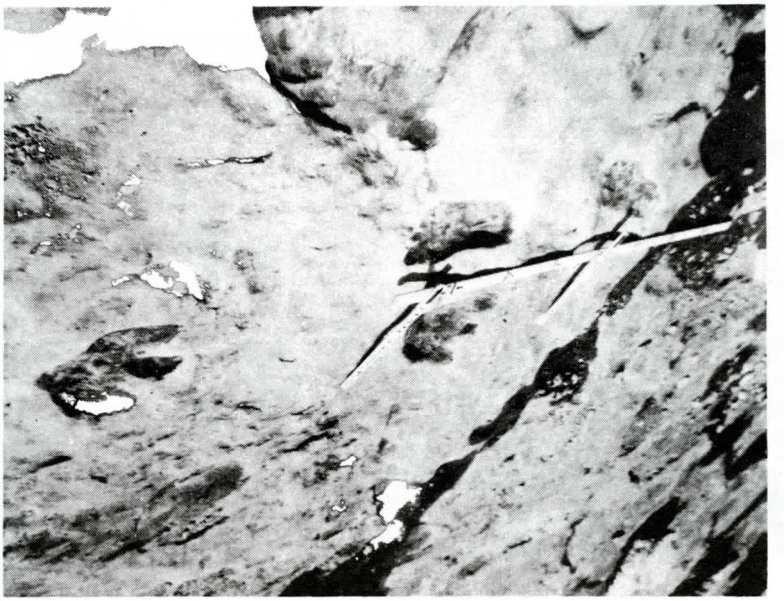
Man track just 8 inches from dinosaur track. Erich Von Daniken's cameraman made movie of these trails the same time that this picture was made.

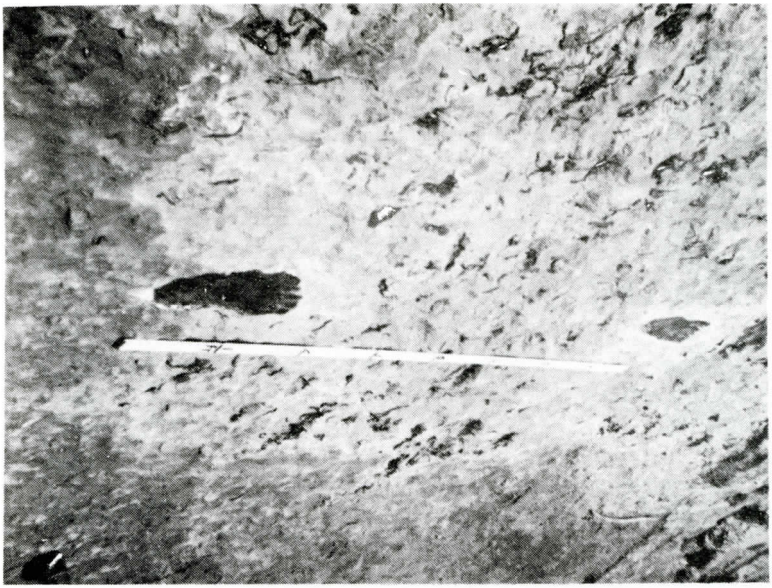
This track was filmed by Dr. Dougherty and Ernst Wild to be used in Chariots Of The Gods by Erich Von Daniken.



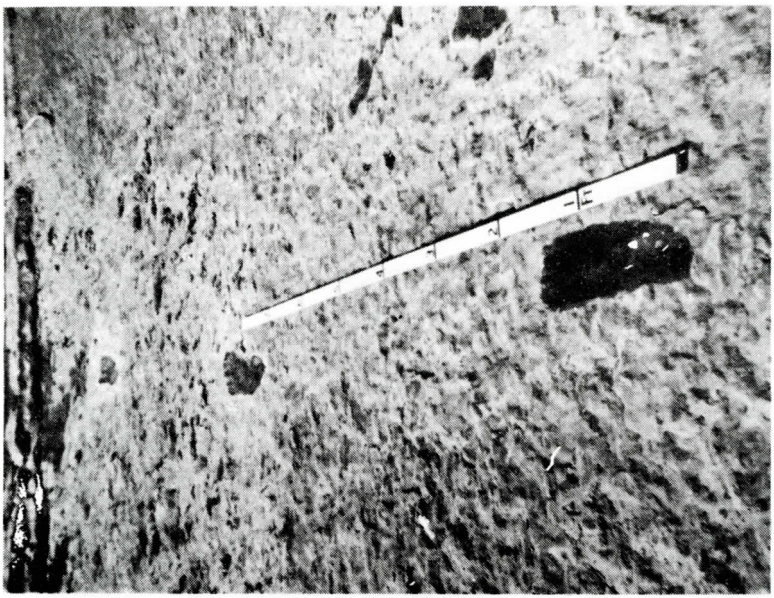
1976

Group 1 Paluxy River
Giant men tracks.

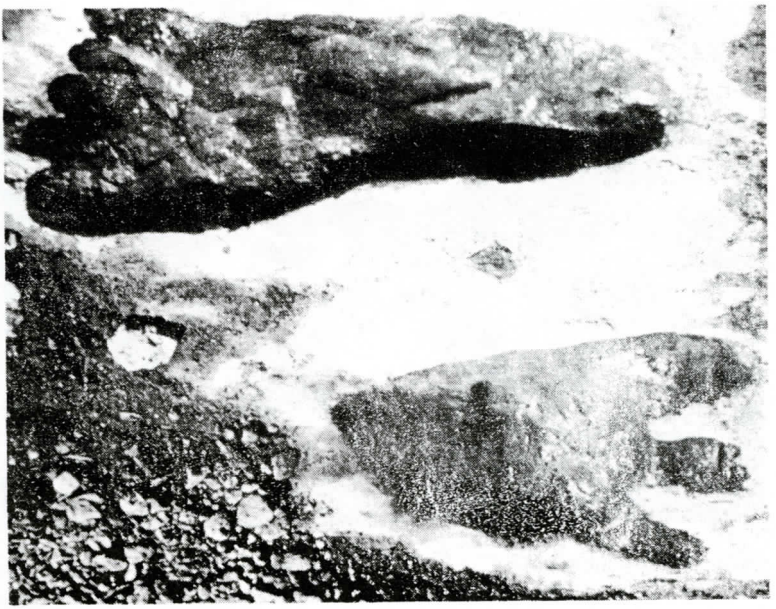




Group No. 1 - Above Highway 144 Bridge there are 3 men tracks in stride.



Above: Man Trail 2 miles upriver from Group 4. This trail has not been documented before now. 1976 - Below: group 4.



Projection in Dakota Cretaceous Sandstone located East of Kenton, Oklahoma. Used by permission of Dr. Wilbur Fields Ozark Bible College. Joplin, Missouri 64801.

This man track discovered July 1976 by Institute for Creation Research. "Big Dig '76".

Below: Man track discovered by Frank and Elma Cordell.

A continuation of Valley of the Giants Big Dig 1976.

John Morris and Cecil Dougherty planned a big dig in the Paluxy River bed scheduled for July 19, 1976. On July 17, just one day prior for the DIG to begin came a sudden flood of the Paluxy River and the river raised five feet in five minutes. The Giant men tracks and the dinosaur tracks are in the river bed. This sudden flood prevented the people who came to the Paluxy to search for more tracks from being able to see the tracks that we had marked. The river stayed muddy all week. There were over two hundred people who came to Glen Rose to help in the dig. We were not able to see the tracks except at group No. 2, where we used one hundred sandbags and put them in a circle and pumped the water out till the riverbed was dry inside the sandbag circle. Then we moved the sandbags to another spot...pumped the water out and made pictures of the men tracks and dinosaur tracks.

I have counted 40 men tracks at group 2 and there are more than 100 dinosaur tracks on the same level of rock in the riverbed at spot No. 2.

During Magellan's travels around the world he made note of seeing a giant on the shore quite naked - so there has always been giants.

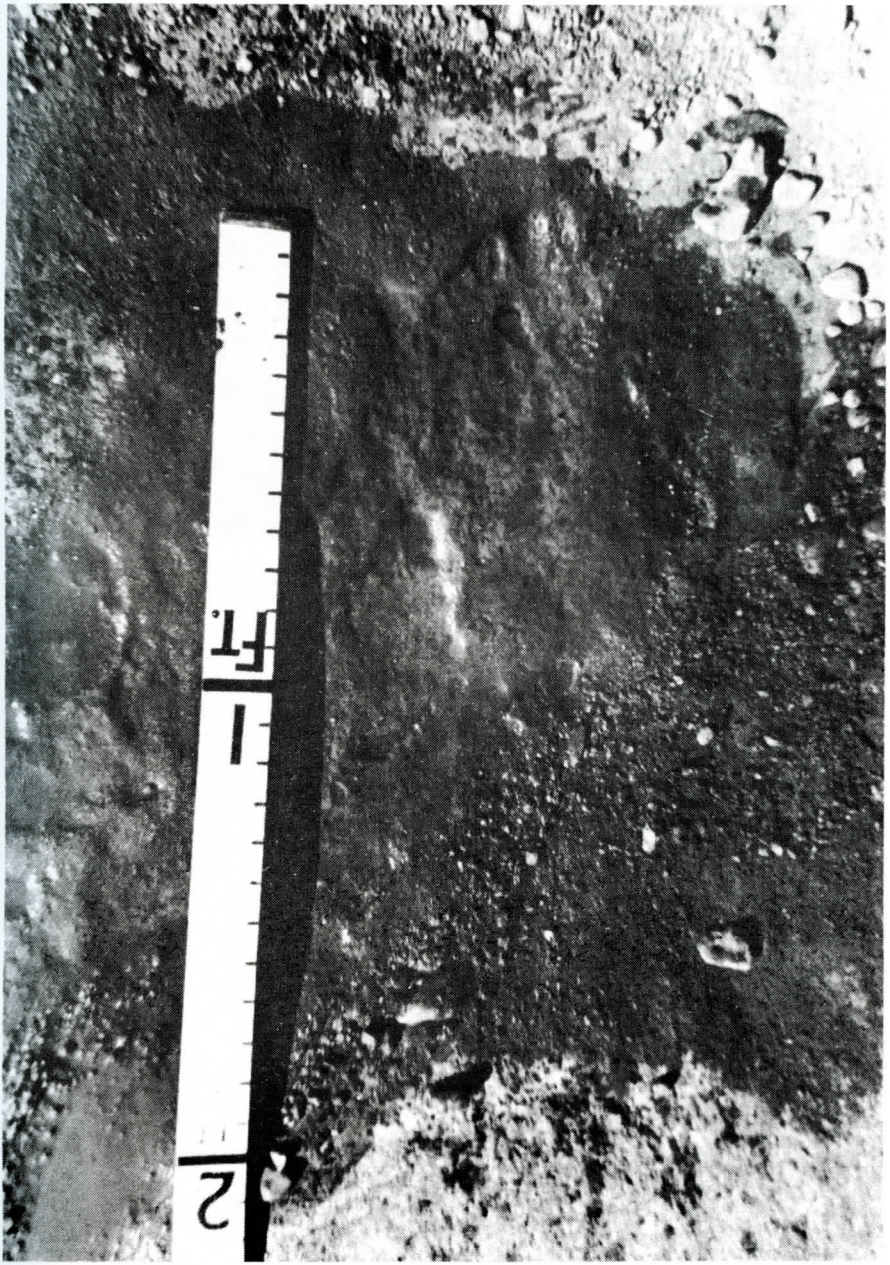
I have spent 10 years searching the Paluxy River for Giant men tracks together with dinosaur tracks. I have counted more than 50 men tracks and more than 100 dinosaur tracks in the same layer of rock. This proves that man did not evolve from anything but rather was created just as you read in Genesis.

I retired in 1977 so I will write "Finis" to this book and start on my next book. (THE END)

Cecil Dougherty

THE FARTHER BACKWARD YOU CAN LOOK, THE FARTHER FOREWARD YOU ARE LIKELY TO SEE.

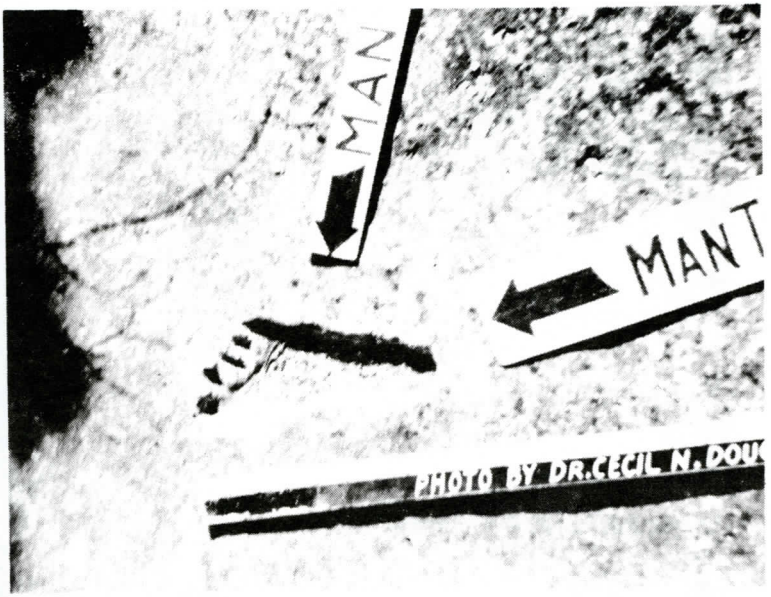
Winston Churchill



Man track in dinosaur layer discovered 1975 by Dr. John Morris, P.H.D. Located Group 4.

Cave painting of a dinosaur used by permission of Erich Von Daniken (owner).

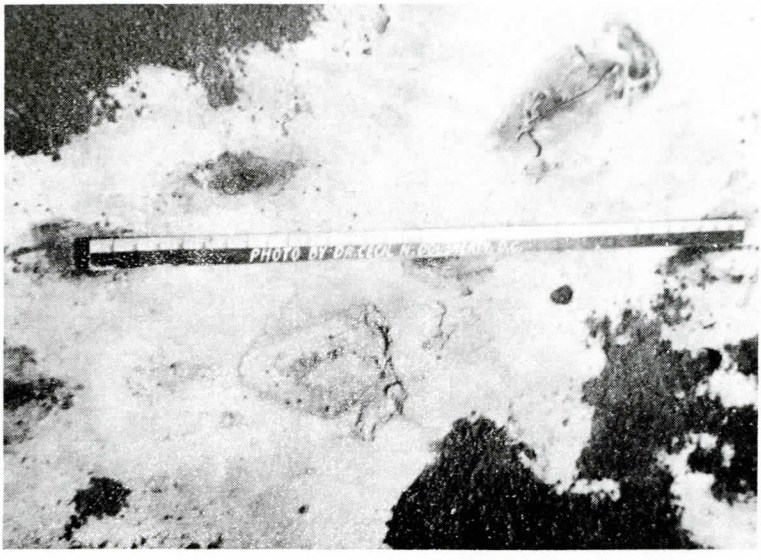
This picture and caption used by special written permission of Erich Von Daniken (owner) from his book (THE GOLD OF THE GODS) Page 12, Fig. 6. The plaque is 11½ x 20½ inches. The artist evidently saw the dinosaur from which he drew this picture.



This man track is made in Cretaceous limestone rock. Discovered by: Cecil Dougherty.

The above two tracks are located 5 miles west of Temple, Texas Airport. They are one meter apart.

Mrs. Lydia Dougherty places one foot by the side of man track to compare size.



Man track in bedrock of Bosque River bed near Iredale, Texas. The river went dry summer 1978 exposing men tracks and dinosaur tracks.
Both pictures above.

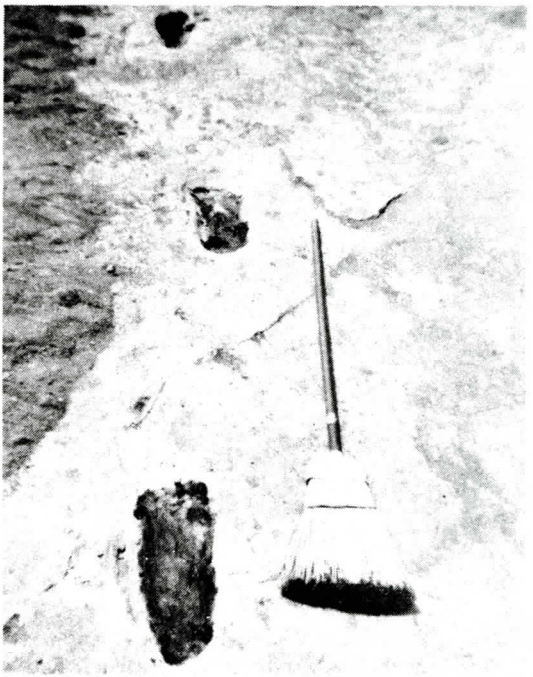
Trail of man tracks in stone ½ mile above McFalls home. Located on a ledge three feet above the Dinosaur layer Paluxy River. Five men tracks in stride.

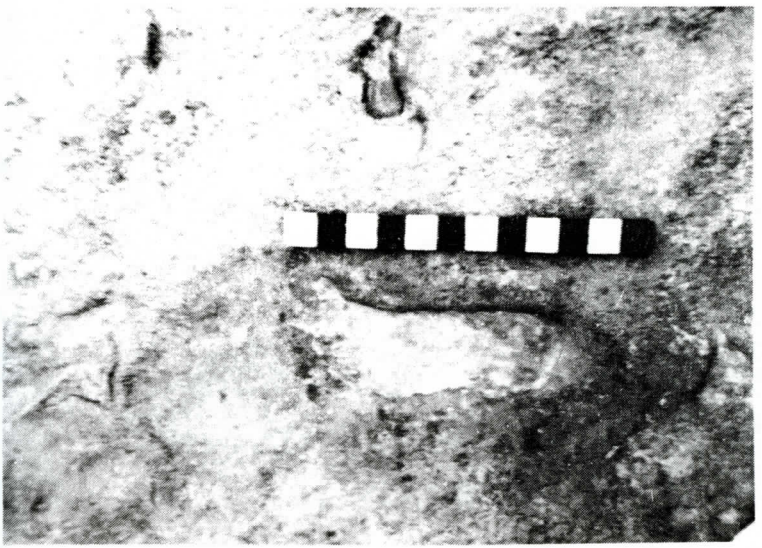
Numerous men tracks and dinosaur tracks in stride. Located behind Robert Mack home in bedrock of the Paluxy River bed upriver from Glen Rose, Texas.

This metal hammer was found near London, Texas. The hammer was encrusted in a solid rock formation.
Man-made Artifact in Ordovician Stone (Evolutionary Dating in 435 Million Years). Sophisticated Iron Implement showing Intelligent Design. (Description by Dr. Carl Baugh)

Dr. Cecil Dougherty makes a movie of THE VALLEY OF THE GIANTS.

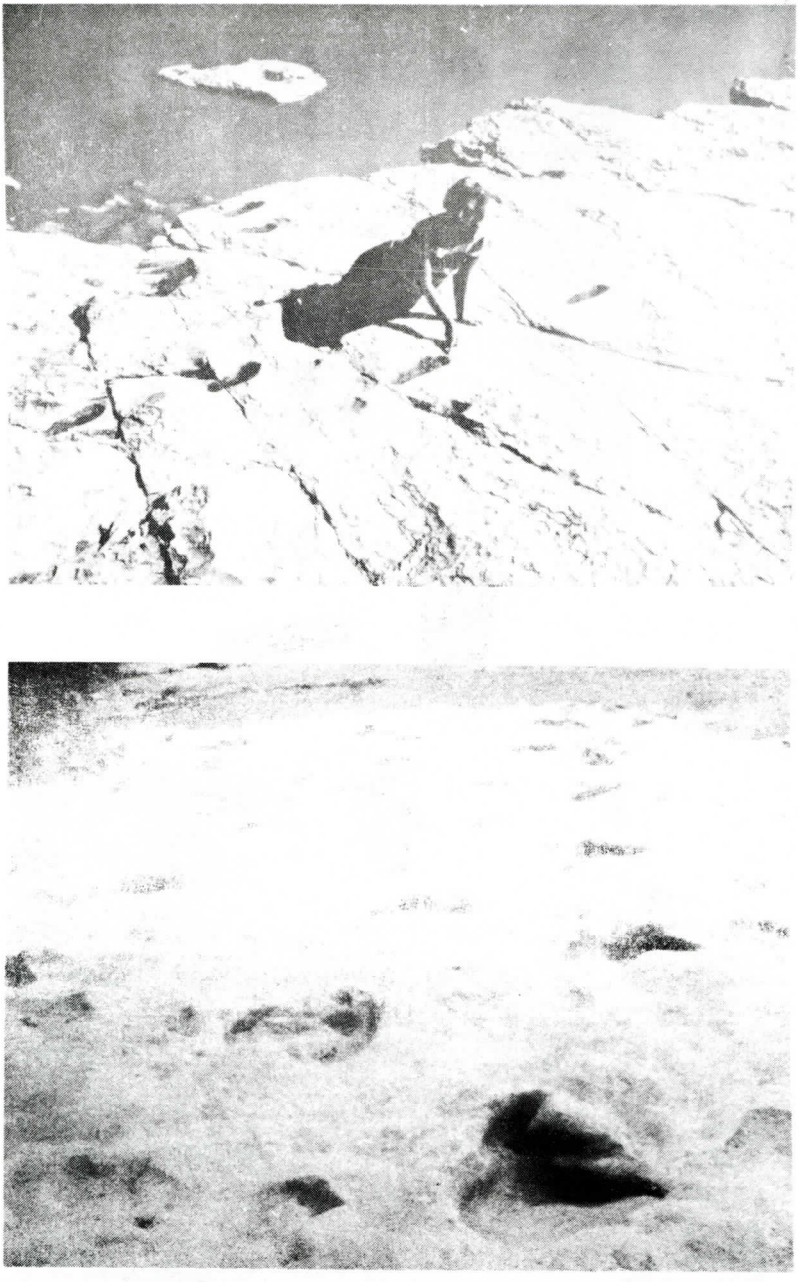
Three men tracks in stride 200 feet above Highway 144 Bridge in Glen Rose.





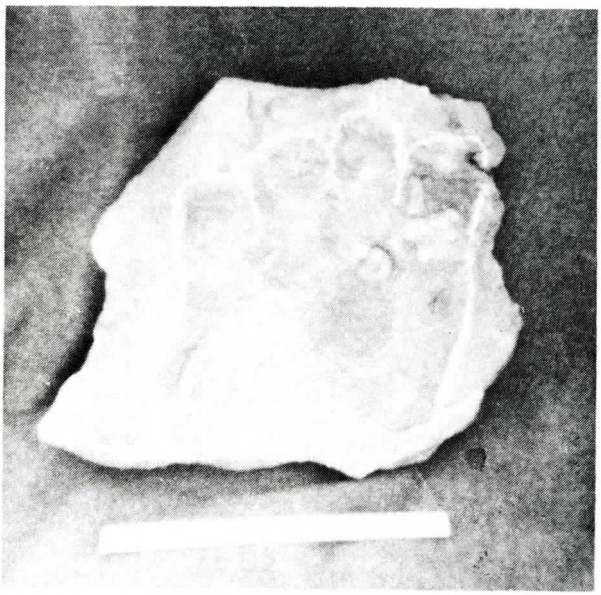
Man track at spot 2. Photo by, Wilbur Fields.

This trail of giant man tracks is in Dinosaur Valley Park.

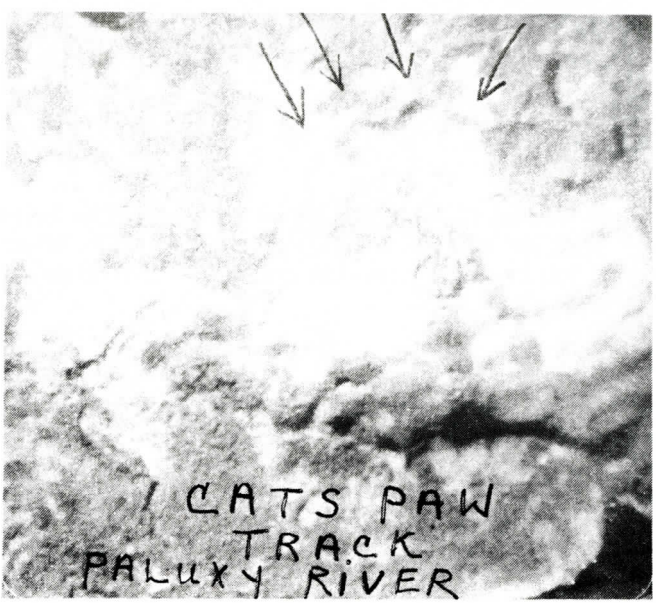


When the Paluxy River went dry in summer of 1978 these two trails of brontosaurus tracks were high and dry so that people could see them.

These Brontosaurus tracks can only be seen when the Paluxy is dry (no flow). They are only a few feet from the spot where seven railroad carloads of tracks were removed and are in Museum of Natural History in New York City.



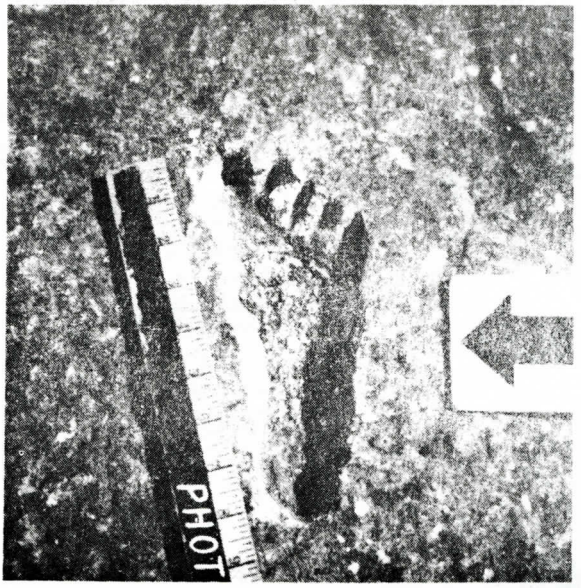
This huge track found at a (DIG) in Mount Victoria, Australia by Dr. Rex Gilroy.



Cats Paw Track, Paluxy River.

There was a lot of hard work involved to make the movie FOOT-PRINTS IN STONE. A 16 M.M. sound movie 45 minutes.

Trail of six men tracks located at Emmett McFalls home at the place where FOOTPRINTS IN STONE was filmed.



This human footprint is located 7 miles west of Temple, Texas. It is made in Cretaceous limestone rock. It was not incised in to the stone.

This human track is similar to a track pictured in National Geographic Magazine Jan. 1979, Page 78.

Mrs. Lydia Dougherty. This picture shows the total amount of water flowing in the Paluxy River in Glen Rose. When the flow dries up we can search for more men tracks and dinosaur tracks together in the limestone river bed.

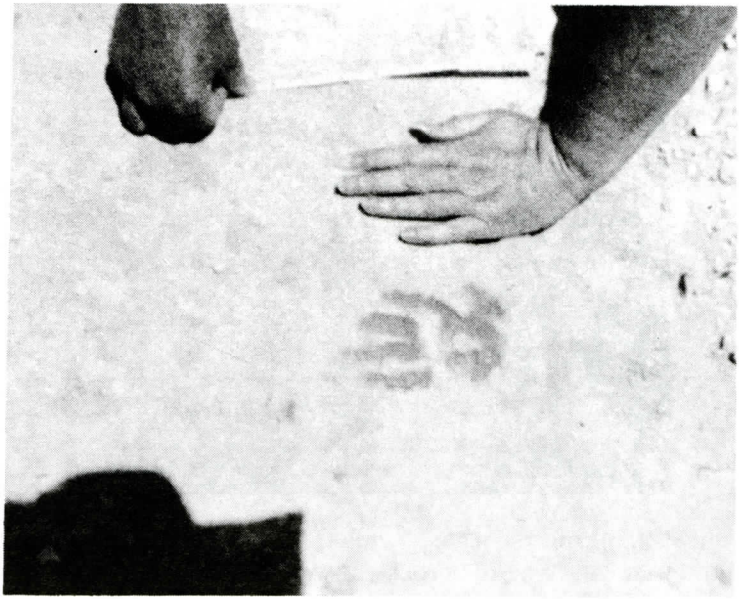


Photo by Elizabeth A. Pope. Dinosaur Valley State Park. This 1978 picture appears to be that of a "childs hand" in the rock ledge directly above some dinosaur tracks. Impression dampened to show better in photograph.

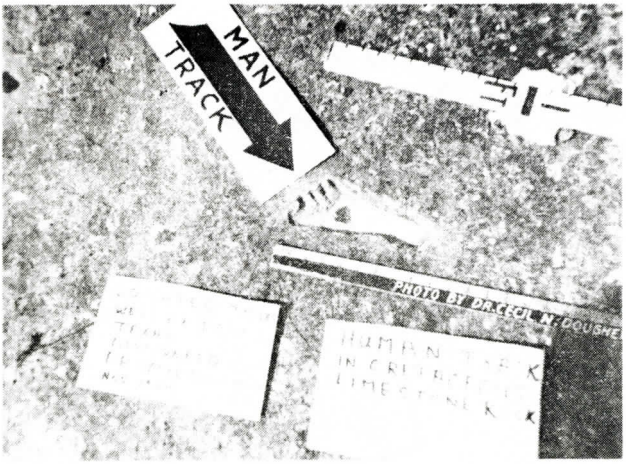

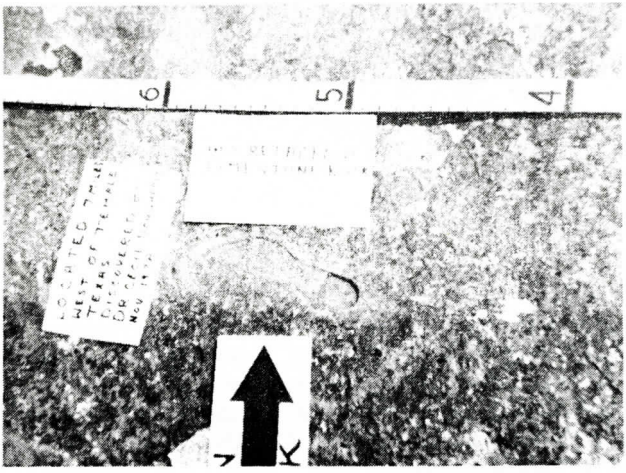

During the Cretaceous period people wore shoes as modern as they wear today. Here is positive proof.

The barefoot human track measures 8¼ inches long, measures 1 9/16 inches across at heel and 2 7/8 inches across at wide part of foot. Track is 1 inch deep in stone.

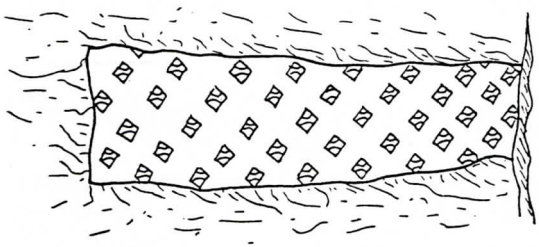
C.

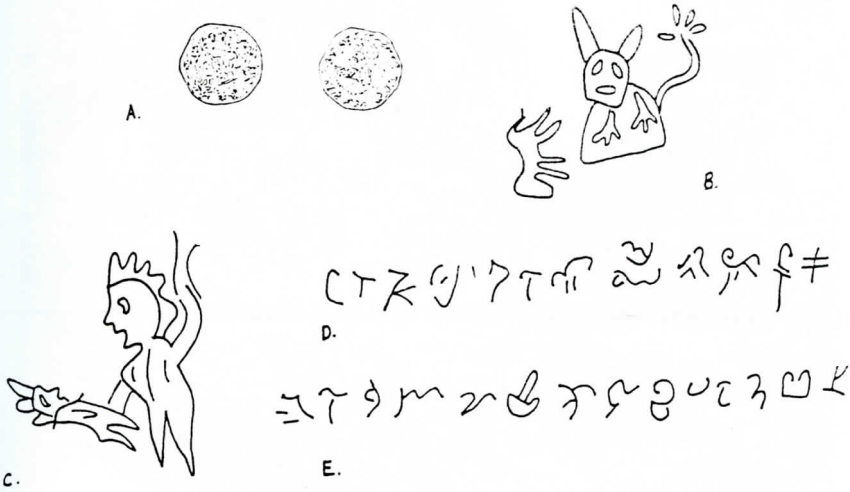


1. These glyphs and petroglyph were discovered engraved on a subterranean wall discovered near Cleveland, Tennessee in 1891. A portion of the wall dips beneath the Tennessee river, and geogolists date it to the beginning of the Quaternary - by their reckoning over a million years old. Yet, writing is only supposed to be 5,000 years old. Reproduced from J.R. Jochmans' STRANGE RELICS FROM THE DEPTHS OF THE EARTH.

A. Glyphs and pictograph from the Tennessee wall.

B. The two letters embedded in marble.

C. The mystery pattern from Pittsburgh.



2. More out-of-place glyphs, these etched on a copper-alloy coin, discovered in 1970 near Lawn Ridge, Illinois, at a depth of 114 feet below the surface. The layer in which it was found is dated geologically between 100,000 and 150,000 years of age. What unknown civilization existed long ago that cast and shaped metals, and had alphabetic writing, at a time when according to conservative historians men were supposedly living in caves and just discovering fire? Reproduced from J. R. Jochmans' STRANGE RELICS FROM THE DEPTHS OF THE EARTH.

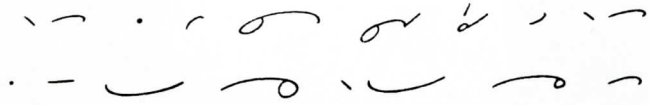
A. The Illinois copper alloy "coin".

B. Detail, reverse side.

C. Detail, front side.

D. Rim glyphs, reverse side.

E. Rim glyphs, front side.

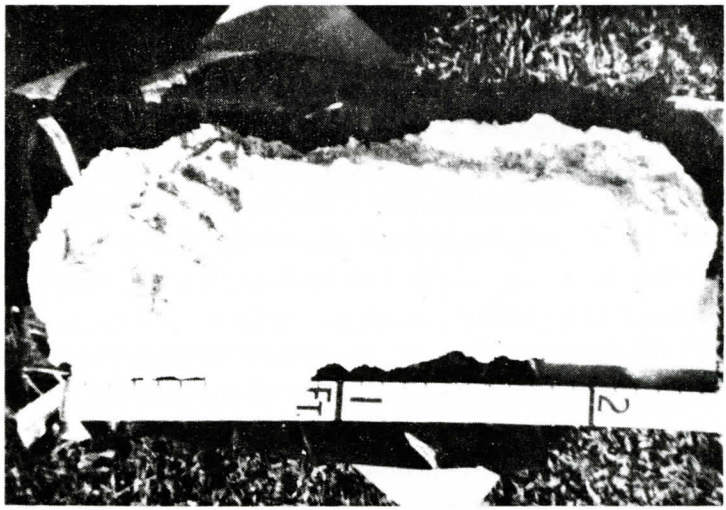


Modern shorthand.
1979 writing for comparison

Dr. Carl Baugh removed 10 inches of solid limestone rock and 10 in. of marl and discovered Man tracks and Dinosaur tracks together. Also, Man's handprint.

Giant Man footprint from Paluxy River bed Glen Rose Texas.

1983 and 1984 Paluxy Report



The MAX TRACK measures twenty-five inches in length from heel to toe. Five such tracks were excavated in July of 1983 on the Emmitt McFall Farm along the Paluxy River. The stride averaged seventy-two inches in length. Estimates are that this man stood twelve feet in height.

The excavations along the Paluxy at the McFall Farm run over six hundred feet in length. An average of eleven feet of overburden have been removed. The top layer of limestone measures twelve inches in depth and has dinosaur prints, or ichnites. Below this is seen a four-inch layer of moist clay marl. The next layer averages eight inches in depth and has been most productive in prints. One hundred sixty-one dinosaur prints and fifty human prints have been excavated here.

On Saturday, August 4th., 1984 the creation evidences excavations led by Carl E. Baugh discovered a small impacted bone in the stone layering near the Al Parker Ranch on the Paluxy. Excavations began within the hour. On Tuesday the team had excavated along the vertebral column and found the rib cage. Within the next thee weeks fourteen feet of vertebra were revealed. Over one hundred ten bones were found altogether, including femur, ilium, ribs, vertebra, and claws.
Standard evolutionary dating places this large carnivor at one hundred thirty million years, but the director of the project places the impacted fossil at 4300 years, during Noah's flood. Carbon dating is now being run to verify this.

Valley of the Giants

Over the past century, God -- in His perfect timing -- has seen fit to reveal many heretofore hidden secrets, all of which, in their own way, authenticate His written word . . . the Dead Sea Scrolls, the Shroud of Turin, Noah's Ark, the Hidden Codes of the Hebrew texts, and almost countless archeological discoveries throughout the Holy Land and Egypt. The discovery, and this chronicling, of the giant men tracks on the same level of limestone bedrock that preserves so many dinosaur tracks in the Paluxy River seems to fit right in with God's timetable in these last days.

It's not the believer who needs these "proofs" or verifications of the Bible. When one accepts the reality of Jesus Christ and is born again, he knows *that he knows* that the Bible is true. It's for the benefit of the natural man -- him for whom things of the Spirit of God are foolishness (I Corinthians 2:14) -- that these secrets are being brought forth. God is going to great measures in this exciting time to reveal His plan and the exactness of His Word.

Valley of the Giants whets the believer's appetite to dig into God's Word more deeply, to meditate the scriptures, and to pursue that personal relationship with the Creator, who just might be wanting to reveal some *secrets* to you. But perhaps more importantly, this little book may motivate the unbeliever and the evolutionist to take closer looks at their theories.
